101 Ways to Improve Your Memory

Garrett Stewart begins *The Deed of Reading* with a memory of his first hesitant confrontation, as a teenager, with poetic density. In that early verbal challenge he finds one driving force of literature: to make language young again in its surprise, coming alive in each new event of reading. But what exactly happens in the textual encounter to make literary phrasing resonate so deeply with readers? To take the measure of literary writing, *The Deed of Reading* convenes diverse philosophic commentary on the linguistics of literature, with stress on the complementary work of Stanley Cavell and Giorgio Agamben. Sympathetic to recent ventures in form-attentive analysis but resisting an emphasis on so-called surface reading, Stewart explores not some new formalism but the internal pressures of language in formation, registering the verbal infrastructure of literary prose as well as verse. In this mode of "contextual" reading, the context is language itself. Literary phrasing, tapping the speech act's own generative pulse, emerges as a latent philosophy of language in its own right, whereby human subjects, finding no secure place to situate themselves within language, settle for its taking place in, through, and between them. Stewart watches and hears this dynamics of wording played out in dozens of poems and novels over two centuries of English literary production—from Wordsworth and Shelley to Browning and Hopkins, from Poe and Dickens through George Eliot, Conrad, James, and on to Toni Morrison. *The Deed of Reading* offers a revisionary contribution to the ethic of verbal attention in the grip of "deep reading."

Homophone Workbook

Kids still need to know homophones, since spelling checkers don't differentiate between words like "deer" and "dear". This book will help children learn the spelling and meaning of various homophones, while at the same time, improving their reading and thinking skills. Each of the five sections of the book, takes thirteen to twenty-one homophone pairs or triplets, with seven activity sheets per section. The first activity in each section asks children to look up each homophone on the list, and write the word and its' definition. The second activity is a matching activity, in which homophones are matched from two columns, and written together on the lines. Having to write the words together will help children learn these homophone relationships. The third activity is a pairing activity, where the children are to read a group of two or three sentences, and underline the common homophones. This activity will help them recognize the homophones, from context, and improve reading skills. The fourth activity is a series of riddle and context clues that requires them to learn the correct spelling for the intended word. This will improve spelling and analytical skills. The fifth activity is a choosing activity. The children have the opportunity to choose the correct homophone, from the words in

parentheses, and write it in the blank space provided in each sentence. The sixth activity is crossword puzzles. Again, analytical skills will be practiced, and since it is necessary to fit the answers into a certain amount of spaces, spelling skills should be improved. The seventh activity is a story or letter, in which the most logical homophone will be written into each blank. This is probably the most difficult activity, but children should be familiar enough with the homophone groups to complete these pages. I've programmed each section, from the easiest to hardest activities, which should help promote gradual learning, building block style. If children learn these homophones well, they will provide an important part of the foundation for their written communication skills.
