What happens when Mars and Venus are in love? How does Jupiter defend himself against Saturn, his difficult father? To whom does Mercury hurry with his cap of invisibility and his winged shoes? Drawing on the psychology of C. G. Jung, Ellynor Barz looks into the foundations of astrology by recounting the myths of the planetary gods. Engaging and amusing her presentation also offers new and surprising insights for both psychology and astrology. When we understand the peculiarities and characteristics of the ancient gods symbolically as possibilities in our own human psyches - projected in astrology onto the big screen of the night sky - we discover a realm of ancient human wisdom that may exceed in subtlety most psychological models explaining the human psyche. Drawing on and actualizing the many unique possibilities inherent within - as described by the horoscope - is a life-long task. All persons have the same fundamental capabilities for experience which we rediscover in these astrological symbols. But the interplay of these essential forces arises in each individual in an entirely unique manner, corresponding to the natal horoscope. This book addresses first the astrological layperson. But it also suggests a point of view seldom considered by the astrologer. And for the interested psychologist, a domain of knowledge and experience is revealed a wealth of material that is more deeply related to psychology than one might expect.

A detailed study of the earliest forms of astrology in Mesopotamia and their far-reaching hermetic influences from the Renaissance to the present day • Reveals the roots of modern astrology in the Babylonian science of omens, which was concerned not with individuals but with the state and king • Explores Mesopotamian mythology as it relates to the planets and to astrology • Traces the hermetic transmission of this knowledge over the centuries from Mesopotamia to Egypt to Renaissance Italy

Among the many significant discoveries excavated from Assyrian king Ashurbanipal's royal library in Nineveh were tablets documenting the development of Mesopotamian astrology, now recognized as the earliest astrological science. Drawing upon translations of the Nineveh library tablets as well as many other ancient sources, Michael Baigent reveals the roots of modern astrology in the Babylonian science of omens. He explains how astrology in the Babylonian and Assyrian empires was concerned not with individuals but with the king and the state. He shows that by the first dynasty of Babylon, around 1900 to 1600 BC, astrology had become a systematic discipline, the preserve of highly trained specialists intent upon interpreting omens from the movements of planets and stars. He explores Mesopotamian mythology as it relates to the planets and to astrology as well as to Mesopotamian religion, magic, and politics--for the mythology of Babylon and Assyria served the state and thus changed as the state changed. He shows how this ancient form of astrology uniquely represents both Sun and Moon as masculine entities and Saturn (Ninurta) as the principle of order imposed on chaos. He examines the connections between ancient astrology and the symbolism of Western religions, such as how the "Greek" or "Templar" cross may symbolize the Babylonian god Nabu, now known as Mercury. Tracing the hermetic transmission of this knowledge over the centuries from Mesopotamia to Egypt to Florence,

Baigent reveals how the religious and magical aspects of early Babylonian cosmological speculation played a significant role in the Renaissance, influencing prominent figures such as Cosimo de Medici, Marsilio Ficino, and Botticelli.

Julius Firmicus Maternus, a native of Sicily, was a Roman lawyer of the senatorial class. He lived in the first half of the fourth century AD (c.280-c.360). He was also a student of Greek astrology, which forms the basis of this book. Of this book, James Herschel Holden writes, "The Mathesis is the lengthiest astrological treatise that has come down to us from the classical period. It consists of eight books, of which the first forms an introductory essay on astrology, and the rest set forth the fundamentals of Greek astrology. Several sections contain material that is found nowhere else." (History of Horoscopic Astrology, pg. 66.) The translator writes, "Magic, philosophy, science and theology combine in strange ways in the thinking of the last centuries of the Roman empire.. Firmicus seemed worthy of note for many reasons. He is almost alone as author of works produced both before and after an apparent conversion to Christianity. He left a lengthy handbook detailing the astrological practices of his day, the only work which has come down to us in its entirety [90% complete: Holden] out of numerous

Until very recently, the idea of ancient Jewish sciences would have been considered unacceptable. Since the 1990's, Early Modern and Medieval Science in Jewish sources has been actively studied, but the consensus was that no real scientific themes could be found in earlier Judaism. This work points them out in detail, and posits a new field of research: the scientific activity evident in the Dead Sea Scrolls and Early Jewish Pseudepigrapha. The publication of new texts and new analyses of older ones reveals crucial elements that are best illuminated by the history of science, and may have interesting consequences for it. The contributors evaluate these texts in relation to astronomy, astrology and physiognomy, marking the first comprehensive attempt to account for scientific themes in Second Temple Judaism. They investigate the meaning and purpose of scientific explorations in an apocalyptic setting. An appreciation of these topics paves the way to a renewed understanding of the scientific fragments scattered throughout rabbinic literature. The book first places the Jewish material in the

ancient context of the Near Eastern and Hellenistic worlds. While the Jewish texts were not on the cutting edge of scientific discovery, they find a meaningful place in the history of science, between Babylonia and Egypt, in the time period between Hipparchus and Ptolemy. The book uses recent advances in method to examine the contacts and networks of Jewish scholars in their ancient setting. Second, the essays here tackle the problematic concept of a national scientific tradition. Although science is nowadays often conceived as universal, the historiography of ancient Jewish sciences demonstrates the importance of seeing the development of science in a local context. The book explores the tension between the hegemony of central scientific traditions and local scientific enterprises, showing the relevance of ancient data to contemporary postcolonial historiography of science. Finally, philosophical questions of the demarcation of science are addressed in a way that can advance the discussion of related ancient materials. Online edition available as part of the NYU Library's Ancient World Digital Library and in partnership with the Institute for the Study of the Ancient World (ISAW).
