Meet Delta Burke - beloved star of Designing Women, accomplished actress, founding partner of Delta Burke Design, a sassy, glamorous actress for whom learning to live as a "real-size" woman has presented all kinds of opportunities. A beauty-pageant winner, Delta had a much publicized weight gain during Designing Women and was the subject of press speculation and gossip. But as she started to come to terms with the fact that her body would always be full figured, she found her fans loved her all the more, and the outpouring of support began to compensate for the emotional strain. With wit, honesty, and directness, she discusses the pain she felt, her agonizing efforts to achieve a size 6 body, and her own journey to self-acceptance, which led her to found Delta Burke Design, a clothing company for the real-size woman. Filled with inspirational motivational advice, humorous anecdotes, and style tips from this nationally adored celebrity, Delta Style shows how positive thinking can transform your state of mind and give you the confidence to live up to your own - and only your own - expectations. Beautiful Delta is a perfect role model for the millions of women who find coping with a real-size body requires strategy and acceptance, as will as for those captivated by her screen presence and smart, upbeat approach to life.

The astonishing novel *Brave New World*, originally published in 1932, presents Aldous Huxley's vision of the future -- of a world utterly transformed. Through the most efficient scientific and psychological engineering, people are genetically designed to be passive and therefore consistently useful to the ruling class. This powerful work of speculative fiction sheds a blazing critical light on the present and is considered to be Huxley's most enduring masterpiece. Following *Brave New World* is the nonfiction work *Brave New World Revisited*, first published in 1958. It is a fascinating work in which Huxley uses his tremendous knowledge of human relations to compare the modern-day world with the prophetic fantasy envisioned in *Brave New World*, including threats to humanity, such as overpopulation, propaganda, and chemical persuasion.

A gripping account of how the 50-year life of Nigeria has been shaped by the crude oil that flows from its Niger Delta, this chronicle is peopled with a cast of characters that is stranger than fiction--from the Area Boy gangsters of Lagos and the anti-imperialist militants in their swamp forest hideouts to the oil company executives in their office suites and a corrupt state governor who stashed a million dollars in cash in his west London penthouse. Part travelogue, part straightforward reportage, this cautionary tale for a world that runs on petroleum focuses on the chaos, violence, and politics surrounding oil in Nigeria. Revealing entanglements between Nigerian government officials and the global oil industry, this examination weaves an absorbing, illuminating, and often-surprising story.

The Water Institute of the Gulf is a not-for-profit, independent research institute dedicated to advancing the understanding of coastal, deltaic, river and water resource systems, both within the Gulf Coast and around the world. Their mission supports the practical application of innovative science and engineering, providing solutions that benefit society. Those who make policy for coastal and deltaic systems, as well as managers of natural resources, need high-quality science and engineering to guide their decisions. The Water Institute of the Gulf began operations in 2012 to address exactly this sort of challenge. *Delta Waters* offers advice to The Water Institute of the Gulf that it might use as part of its strategic planning process. This report focuses on strategic research to support integrated water resources management in the lower Mississippi River delta and includes international comparative assessments. The recommendations of *Delta Waters* promote a human and environmental systems approach to scientific research that supports integrated water and environmental resources management in the lower Mississippi River and delta, and offers ideas regarding comparative assessments with other, relevant deltaic regions around the world. This report provides input for research into common deltaic problems and challenges, identifies strategic research for The Water Institute of the Gulf, and suggests ways that the organization can utilize knowledge gained from the lower Mississippi River and delta system in developing a research program to support water management decisions in other large river/delta complexes.

Remembering Emmett Till

Books Out Loud

Take a drive through the Mississippi Delta today and you'll find a landscape dotted with memorials to major figures and events from the civil rights movement. Perhaps the most chilling are those devoted to the murder of Emmett Till, a tragedy of hate and injustice that became a beacon in the fight for racial equality. The ways this event is remembered have been fraught from the beginning, revealing currents of controversy, patronage, and racism lurking just behind the placid facades of historical markers. In *Remembering Emmett Till*, Dave Tell gives us five accounts of the commemoration of this infamous crime. In a development no one could have foreseen, Till's murder—one of the darkest moments in the region's history—has become an economic driver for the Delta. Historical tourism has transformed seemingly innocuous places like bridges, boat landings, gas stations, and riverbeds into sites of racial politics, reminders of the still-unsettled question of how best to remember the victim of this heinous crime. Tell builds an insightful and persuasive case for how these memorials have altered the Delta's physical and cultural landscape, drawing potent connections between the dawn of the civil rights era and our own moment of renewed fire for racial justice.

Brave New World and Brave New World Revisited

The Tide-Dominated Han River Delta provides a thorough analysis of a river delta in which tidal currents have reworked the river-borne sediment, generating characteristic geomorphological and sedimentological signatures in the process. Such "tide-dominated" deltas are common in the modern ocean, forming the substrate upon which entire populations are built. Furthermore, ancient examples contain enormous volumes of hydrocarbon. Despite this, tide-dominated deltas remain less well understood than their wave- and river-dominated counterparts, largely because processes within them are inherently more complex and fewer modern examples have been investigated in detail. This multi-year study by a team of experts in coastal geoscience represents the most complete documentation of a tide-dominated delta to date. Results help advance, and are applicable to, a broad range of fields within sedimentary geology, including clastic sedimentology, seismic and sequence stratigraphy, and coastal geomorphology, in addition to petroleum geology and reservoir engineering. Offers new access to results of a multi-year hydrocarbon-reservoir analogue study not available elsewhere. Features 75 full-color figures and illustrations to emphasize critical aspects of the

Now the inspiration for the CBS Television drama, "The Unit." Delta Force. They are the U.S. Army's most elite top-secret strike force. They dominate the modern battlefield, but you won't hear about their heroics on CNN. No headlines can reveal their top-secret missions, and no book has ever taken readers inside—until now. Here, a founding member of Delta Force takes us behind the veil of secrecy and into the action—to reveal the never-before-told story of 1st Special Forces Operational Detachment-D (Delta Force). Inside Delta Force The Story of America's Elite Counterterrorist Unit He is a master of espionage, trained to take on hijackers, terrorists, hostage takers, and enemy armies. He can deploy by parachute or arrive by commercial aircraft. Survive alone in hostile cities. Speak foreign languages fluently. Strike at enemy targets with stunning swiftness and extraordinary teamwork. He is the ultimate modern warrior: the Delta Force Operator. In this dramatic behind-the-scenes chronicle, Eric Haney, one of the founding members of Delta Force, takes us inside this legendary counterterrorist unit. Here, for the first time, are details of the grueling selection process—designed to break the strongest of men—that singles out the best of the best: the Delta Force Operator. With heart-stopping immediacy, Haney tells what it's really like to enter a hostage-held airplane. And from his days in Beirut, Haney tells an unforgettable tale of bodyguards and bombs, of a day-to-day life of madness and beauty, and of how he and a teammate are called on to kill two gunmen targeting U.S. Marines at the Beirut airport. As part of the team sent to rescue American hostages in Tehran, Haney offers a first-person description of that failed mission that is a chilling, compelling account of a bold maneuver undone by chance—and a few fatal mistakes. From fighting guerrilla warfare in Honduras to rescuing missionaries in Sudan and leading the way onto the island of Grenada, Eric Haney captures the daring and discipline that distinguish the men of Delta Force. Inside Delta Force brings honor to these singular men while it puts us in the middle of action that is sudden, frightening, and nonstop around the world. From the Hardcover edition.

Critical human activities take place at sea, including trade, tourism, migration, scientific exploration and resource exploitation. This book offers a novel and important contribution to an ever-emerging cross-disciplinary subject matter and challenges human geography's preoccupation with the terrestrial. Linking to new theoretical debates shaping the geographic discipline, (such as affect, assemblage, emotion, hybridity and the more-than-human) this volume unlocks new knowledge concerning the human geographies of ocean space and dispenses with fixed conceptions of space. It advances geographical understanding based on the world as 'becoming', changing, mobile and processional.

Coasts and Estuaries: The Future provides valuable information on how we can protect and maintain natural ecological structures while also allowing estuaries to deliver services that produce societal goods and benefits. These issues are addressed through chapters detailing case studies from estuaries and coastal waters worldwide, presenting a full range of natural variability and human pressures. Following this, a series of chapters written by scientific leaders worldwide synthesizes the problems and offers solutions for specific issues graded within the framework of the socio-economic-environmental mosaic. These include fisheries, climate change, coastal megacities, evolving human-nature interactions, remediation measures, and integrated coastal management. The problems faced by half of the world living near coasts are truly a worldwide challenge as well as an opportunity for scientists to study commonalities and differences and provide solutions. This book is centered around the proposed DAPSI(W)R(M) framework, where drivers of basic human needs requires activities that each produce pressures. The pressures are mechanisms of state change on the natural system and Impacts on societal welfare (including well-being). These problems then require responses, which are the solutions relating to governance, socio-economic and cultural measures (Scharin et al 2016). Covers estuaries and coastal seas worldwide, integrating their commonality, differences and solutions for sustainability Includes global case studies from leading worldwide contributors, with accompanying boxes highlighting a synopsis about a particular estuary and coastal sea, making all information easy to find Presents full color images to aid the reader in a better understanding of details of each case study Provides a multi-disciplinary approach, linking biology, physics, climate and social sciences

When Michael Copperman left Stanford University for the Mississippi Delta in 2002, he imagined he would lift underprivileged children from the narrow horizons of rural poverty. Well-meaning but naïve, the Asian American from the West Coast soon lost his bearings in a world divided between black and white. He had no idea how to manage a classroom or help children navigate the considerable challenges they faced. In trying to help students, he often found he couldn't afford to give what they required--sometimes with heartbreaking consequences. His desperate efforts to save child after child were misguided but sincere. He offered children the best invitations to success he could manage. But he still felt like an outsider who was failing

the children and himself. Teach For America has for a decade been the nation's largest employer of recent college graduates but has come under increasing criticism in recent years even as it has grown exponentially. This memoir considers the distance between the idealism of the organization's creed that "One day, all children in this nation will have the opportunity to attain an excellent education and reach their full potential" and what it actually means to teach in America's poorest and most troubled public schools. Copperman's memoir vividly captures his disorientation in the divided world of the Delta, even as the author marvels at the wit and resilience of the children in his classroom. To them, he is at once an authority figure and a stranger minority than even they are--a lone Asian, an outsider among outsiders. His journey is of great relevance to teachers, administrators, and parents longing for quality education in America. His frank story shows that the solutions for impoverished schools are far from simple.

This book answers key questions about environment, people and their shared future in deltas. It develops a systematic and holistic approach for policy-orientated analysis for the future of these regions. It does so by focusing on ecosystem services in the world's largest, most populous and most iconic delta region, that of the Ganges-Brahmaputra delta in Bangladesh. The book covers the conceptual basis, research approaches and challenges, while also providing a methodology for integration across multiple disciplines, offering a potential prototype for assessments of deltas worldwide. Ecosystem Services for Well-Being in Deltas analyses changing ecosystem services in deltas; the health and well-being of people reliant on them; the continued central role of agriculture and fishing; and the implications of aquaculture in such environments. The analysis is brought together in an integrated and accessible way to examine the future of the Ganges Brahmaputra delta based on a near decade of research by a team of the world's leading scientists on deltas and their human and environmental dimensions. This book is essential reading for students and academics within the fields of Environmental Geography, Sustainable Development and Environmental Policy focused on solving the world's most critical challenges of balancing humans with their environments. "When the history book is written on the restructuring of this industry, Delta will be the greatest turnaround story in it." --Delta CEO Gerald Grinstein, December 19, 2006 Its reputation was now as tattered as the interiors of its airplanes. Delta Air Lines, on September 14, 2005, was nothing like the world-beating company it had been just five years earlier, let alone decades before that. On this day, Delta found itself surrounded by lawyers, dejectedly filing for bankruptcy. Few believed it could ever reclaim its perch atop the US airline industry. But it did. *Glory Lost and Found: How Delta Climbed from Despair to Dominance in the Post-9/11 Era* tells the story of Delta's dramatic tumble into bankruptcy and how it climbed its way back to pre-eminence despite hurricane-force headwinds: high fuel prices, a hostile takeover bid, relentless competition, economic meltdowns and geopolitical shocks. This book stems from a decade of research and countless interviews by Airline Weekly's Seth Kaplan and Jay Shabat. It's a profile in leadership: Delta became not only the greatest turnaround story in its own industry but also one of the greatest in the history of corporate America. Delta did the unimaginable by simultaneously resurrecting its finances and the spirits of its employees and customers. And while redefining itself, Delta also redefined an industry.

The Anthropocene is the human-dominated modern era that has accelerated social, environmental and climate change across the world in the last few decades. This open access book examines the challenges the Anthropocene presents to the sustainable management of deltas, both the many threats as well as the opportunities. In the world's deltas the Anthropocene is manifest in major land use change, the damming of rivers, the engineering of coasts and the growth of some of the world's largest megacities; deltas are home to one in twelve of all people in the world. The book explores bio-physical and social dynamics and makes clear adaptation choices and trade-offs that underpin policy and governance processes, including visionary delta management plans. It details new analysis to illustrate these challenges, based on three significant and contrasting deltas: the Ganges-Brahmaputra-Meghna, Mahanadi and Volta. This multi-disciplinary, policy-orientated volume is strongly aligned to the United Nation's Sustainable Development Goals as delta populations often experience extremes of poverty, gender and structural inequality, variable levels of health and well-being, while being vulnerable to extreme and systematic climate change. Robert J Nicholls is Professor of Coastal Engineering within Engineering and Physical Sciences at the University of Southampton, UK. He has contributed to a wide range of influential national and international publications including the IPCC Assessment Reports. W Neil Adger is Professor of Human Geography at the University of Exeter, UK. His research examines demographic, political economy, public health and well-being aspects of the Anthropocene. Craig W Hutton is Professor of Sustainability Science within Geography and Environment at the University of Southampton, UK. His research focuses on spatial analysis of vulnerability and the incorporation of sustainable management, policy and governance into decision-making processes. Susan E Hanson is Research Fellow within Engineering and Physical Sciences at the University of Southampton, UK. She specializes in coastal vulnerability and management, particularly as a consequence of climate change.
