Interpreting Quantitative Data with IBM SPSS Statistics

"An in-depth, well-researched, and thoughtful exploration of the 'fat boom' in America." —TheBoston Globe Low carb, high protein, raw foods . . . despite our seemingly endless obsession with fad diets, the startling truth is that six out of ten Americans are overweight or obese. In Fat Land, award-winning nutrition and health journalist Greg Critser examines the facts and societal factors behind the sensational headlines, taking on everything from supersize to Super Mario, high-fructose corn syrup to the high costs of physical education. With a sharp eye and even sharper tongue, Critser examines why pediatricians are now treating conditions rarely seen in children before; why type 2 diabetes is on the rise; the personal struggles of those with weight problems—especially among the poor—and how agribusiness has altered our waistlines. Praised by the New York Times as "absorbing" and by Newsday as "riveting," this disarmingly funny, yet truly alarming, exposé stands as an important examination of one of the most pressing medical and social issues in the United States. "One scary book and a good companion to Eric Schlosser's Fast Food Nation." —Seattle Post-Intelligencer

Criminal Justice

How can a society prevent-not deter, not punish-but prevent crime? Criminal justice prevention, commonly called crime control, aims to prevent crime after an initial offence has been commited through anything from an arrest to a death penalty sentence. These traditional means have been frequently examined and their efficacy just as frequently questioned. Promising new forms of crime prevention have emerged and expanded as important components of an overall strategy to reduce crime. Crime prevention today has developed along three lines: interventions to improve the life chances of children and prevent them from embarking on a life of crime; programs and policies designed to ameliorate the social conditions and institutions that influence offending; and the modification or manipulation of the physical environment, products, or systems to reduce everyday opportunities for crime. Each strategy aims at preventing crime or criminal offending in the first instance - before the act has been committed. Each, importantly, takes place outside of the formal criminal justice system, representing an alternative, perhaps even socially progressive way to reduce crime. The Oxford Handbook of Crime Prevention is a comprehensive, up-to-date, and authoritative review of research on crime prevention. Bringing together top scholars in criminology, public policy, psychology, and sociology, this Handbook includes critical reviews of the main theories that form the basis of crime prevention, evidence-based assessments of the effectiveness of the most important interventions, and

cross-cutting essays that examine implementation, evaluation methodology, and public policy. Covering the three major crime prevention strategies active today-developmental, community, and situational-this definitive volume addresses seriously and critically the ways in which the United States and the Western world have attempted, and should continue to strive for the of crime.

Statistics in Criminal Justice takes an approach that emphasizes the application and interpretation of statistics in research in crime and justice. This text is meant for both students and researchers who want to gain a basic understanding of common statistical methods used in this field. In general, the text relies on a building-block approach, meaning that each chapter helps to prepare the student for the chapters that follow. It also means that the level of

sophistication of the text increases as the text progresses. Throughout the text there is an emphasis on comprehension and interpretation, rather than computation. However, as the statistical methods discussed become more complex and demanding to compute, there is increasing use and integration of statistical software. This approach is meant to provide the reader with an accessible, yet sophisticated understanding of statistics that can be used to examine real-life criminal justice problems with popular statistical software programs. The primary goal of the text is to give students and researchers a basic understanding of statistical concepts and methods that will leave them with the confidence and the tools for tackling more complex problems on their own. New to the 4th Edition · New chapter on experimental design and the analysis of experimental data. · New chapter on multi-level models, including growth-curve models. · New computer exercises throughout the text to illustrate the use of both SPSS and Stata. · Revision of exercises at the end of each chapter that places greater emphasis on using statistical software. · Additional resources on the text's web site for instructors and students, including answers to selected problems, syntax for replicating text examples in SPSS and Stata, and other materials that can be used to supplement the use of the text.

The vast majority of statistics books delineate techniques used to analyze collected data. The Joy of Statistics is not one of these books. It consists of a series of 42 "short

stories", each illustrating how statistical methods applied to data produce insight and solutions to the questions the data were collected to answer. Real-life and sometimes artificial data are used to demonstrate the often painless method and magic of statistics. In addition, the text contains brief histories of the evolution of statistical methods and a number of brief biographies of the most famous statisticians of the 20th century. Sprinkled throughout are statistical jokes, puzzles and traditional stories. The levels of statistical texts span a spectrum, from elementary to introductory to application to theoretical to advanced mathematical. This book explores a variety of statistical applications using graphs and plots, along with detailed and intuitive descriptions, and occasionally a bit of 10th grade mathematics. Examples of a few of the topics included among these "short stories" are pet ownership, gambling games such as roulette, blackjack and lotteries, as well as more serious subjects such as comparison of black/white infant mortality risk, infant birth weight and maternal age, estimation of coronary heart disease risk and racial differences in Hodgkin disease. The statistical descriptions of these topics are in many cases accompanied by easy to understand explanations labelled "How it Works."

Criminal Justice Organizations: Administration and Management

Fire in the Heart uncovers the dynamic processes through which some white Americans become activists for racial justice. The book reports powerful accounts of the development of racial awareness drawn from in-depth interviews with fifty white activists in the fields of community organizing, education, and criminal justice reform. Drawing extensively on the rich interview material, Mark Warren shows how white Americans can develop a commitment to racial justice, not just because it is the right thing to do, but because they embrace the cause as their own. Contrary to much contemporary thinking on racial issues focused on altruism or interests, Warren finds that cognitive and rational processes alone do little to move whites to action. Rather, the motivation to take and sustain action for racial justice is profoundly moral and relational. Warren shows how white activists come to find common cause with people of color when their core values are engaged, as they build relationships with people of color that lead to caring, and when they develop a vision of a racially just future that they understand to benefit everyone--themselves, other whites, and people of color. Warren also considers the complex dynamics and dilemmas white people face in working in multiracial organizations

committed to systemic change in America's racial order, and provides a deeper understanding and appreciation of the role that white people can play in efforts to promote racial justice. The first study of its kind, Fire in the Heart brings to light the perspectives of white people who are working day-to-day to build not a post-racial America but the foundations for a truly multiracial America rooted in a caring, human community with equity and justice at its core.

Most people in jail have not been convicted of a crime. Instead, they have been accused of a crime and cannot afford to post the bail amount to guarantee their freedom until trial. Punishing Poverty examines how the current system of pretrial release detains hundreds of thousands of defendants awaiting trial. Tracing the historical antecedents of the US bail system, with particular attention to the failures of bail reform efforts in the mid to late twentieth century, the authors describe the painful social and economic impact of contemporary bail decisions. The first book-length treatment to analyze how bail reproduces racial and economic inequality throughout the criminal justice system, Punishing Poverty explores reform efforts, as jurisdictions begin to move away from money bail systems, and the attempts of the bail bond industry to push back against such reforms. This accessibly written book gives a succinct overview of the role of pretrial detention in fueling mass incarceration and is essential reading for researchers and reformers alike.
