Parenting Chaos

In a world of modern, involved, caring parents, why are so many kids aggressive and cruel? Where is intelligence hidden in the brain, and why does that matter? Why do cross-racial friendships decrease in schools that are more integrated? If

98% of kids think lying is morally wrong, then why do 98% of kids lie? What's the single most important thing that helps infants learn language? NurtureShock is a groundbreaking collaboration between award-winning science journalists Po Bronson and Ashley Merryman. They argue that when it comes to children, we've mistaken good intentions for good ideas. With impeccable storytelling and razor-sharp analysis, they demonstrate that many of modern society's strategies for nurturing children are in fact backfiring--because key twists in the science have been overlooked. Nothing like a parenting manual, the authors' work is an insightful exploration of themes and issues that transcend children's (and adults') lives.

The Lost Gospel: Decoding the Ancient Text that Reveals Jesus' Marriage to Mary the Magdalene

Advises parents on how to handle children who exhibits intense temper outbursts, sudden mood swings, extreme noncompliance, and verbal and physical aggression. Addresses behaviors that stem from brain-based deficits in two critical developmental skills: flexibility and frustration tolerance. These children may be diagnosed with a variety of psychiatric disorders, including oppositional-defiant disorder, attention-deficit/hyperactivity disorder (ADHD), bipolar disorder, and Tourette's disorder. The author explains how to anticipate and defuse the behaviors by teaching the child the skills to handle frustration adaptively, to become more flexible, socially and emotionally.

NurtureShock

Renowned child psychologist and New York Times bestselling author of *Lost at School* and *The Explosive Child* explains how to cultivate a better parent-child relationship while also nurturing empathy, honesty, resilience, and independence. Parents have an important task: figure out who their child is—his or her skills, preferences, beliefs, values, personality traits, goals, and direction—get comfortable with it, and then help them pursue and live a life according to it. Yet parents also want their kids to be independent, but not if they are going to make bad choices. They want to avoid being too overbearing, but not if an apathetic kid is what they have to show for it. They want to have a good relationship with their kids, but not if that means being a pushover. They don't want to scream, but they do want to be heard. Good parenting is about striking the balance between a child's characteristics and a parent's desire to have influence. Dr. Ross Greene —makes a powerful case for rethinking typical approaches to parenting and disciplining children— (The Atlantic). Through his well-known model of solving problems collaboratively, parents can forgo timeout and sticker charts; stop badgering, berating, threatening, and punishing; allow their kids to feel heard and validated; and have influence. From homework to hygiene, curfews, to screen time, Dr. Greene —arms parents with guidelines that are clear, doable, and sure to empower both parents and their children— (Adele Faber, coauthor of *How to Talk So Kids Will Listen*). *Raising Human Beings* is —inspirational—a game-changer for parents, teachers, and

"No provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider." Did you know that these twenty-six words are responsible for much of America's multibillion-dollar online industry? What we can and cannot write, say, and do online is based on just one law—a law that protects online services from lawsuits based on user content. Jeff Kosseff exposes the workings of Section 230 of the Communications Decency Act, which has lived mostly in the shadows since its enshrinement in 1996. Because many segments of American society now exist largely online, Kosseff argues that we need to understand and pay attention to what Section 230 really means and how it affects what we like, share, and comment upon every day. *The Twenty-Six Words That Created the Internet* tells the story of the institutions that flourished as a result of this powerful statute. It introduces us to those who created the law, those who advocated for it, and those involved in some of the most prominent cases decided under the law. Kosseff assesses the law that has facilitated freedom of online speech, trolling, and much more. His keen eye for the law, combined with his background as an award-winning journalist, demystifies a statute that affects all our lives—for good and for ill. While Section 230 may be imperfect and in need of refinement, Kosseff maintains that it is necessary to foster free speech and innovation. The hidden brain is the voice in our ear when we make the most important decisions in our lives—but we're never aware

of it. The hidden brain decides whom we fall in love with and whom we hate. It tells us to vote for the white candidate and convict the dark-skinned defendant, to hire the thin woman but pay her less than the man doing the same job. It can direct us to safety when disaster strikes and move us to extraordinary acts of altruism. But it can also be manipulated to turn an ordinary person into a suicide terrorist or a group of bystanders into a mob. In a series of compulsively readable narratives, Shankar Vedantam journeys through the latest discoveries in neuroscience, psychology, and behavioral science to uncover the darkest corner of our minds and its decisive impact on the choices we make as individuals and as a society. Filled with fascinating characters, dramatic storytelling, and cutting-edge science, this is an engrossing exploration of the secrets our brains keep from us—and how they are revealed.

The School Discipline Fix: Changing Behavior Using the Collaborative Problem Solving Approach

A galvanizing and powerful debut, *Mill Town* is an American story, a human predicament, and a moral wake-up call that asks: what are we willing to tolerate and whose lives are we willing to sacrifice for our own survival? Kerri Arsenault grew up in the rural working class town of Mexico, Maine. For over 100 years the community orbited around a paper mill that employs most townspeople, including three generations of Arsenault's own family. Years after she moved away, Arsenault realized the price she paid for her seemingly secure childhood. The mill, while providing livelihoods for nearly everyone, also contributed to the destruction of the environment and the decline of the town's economic, physical, and emotional health in a slow-moving catastrophe, earning the area the nickname "Cancer Valley." *Mill Town* is an personal investigation, where Arsenault sifts through historical archives and scientific reports, talks to family and neighbors, and examines her own childhood to illuminate the rise and collapse of the working-class, the hazards of loving and leaving home, and the ambiguous nature of toxics and disease. *Mill Town* is a moral wake-up call that asks, Whose lives are we willing to sacrifice for our own survival?

We've all seen them: kids hypnotically staring at glowing screens in restaurants, in playgrounds and in friends' houses—and the numbers are growing. Like a virtual scourge, the illuminated glowing faces—the Glow Kids—are multiplying. But at what cost? Is this just a harmless indulgence or fad like some sort of digital hula-hoop? Some say that glowing screens might even be good for kids—a form of interactive educational tool. Don't believe it. In *Glow Kids*, Dr. Nicholas Kardaras will examine how technology—more specifically, age-inappropriate screen tech, with all of its glowing ubiquity—has profoundly affected the brains of an entire generation. Brain imaging research is showing that stimulating glowing screens are as dopaminergic (dopamine activating) to the brain's pleasure center as sex. And a growing mountain of clinical research correlates screen tech with disorders like ADHD, addiction, anxiety, depression, increased aggression, and even psychosis. Most shocking of all, recent brain imaging studies conclusively show that excessive screen exposure can neurologically damage a young person's developing brain in the same way that cocaine addiction can. Kardaras will dive into the sociological, psychological, cultural, and economic factors involved in the global tech epidemic with one major goal: to explore the effect all of our wonderful shiny new technology is having on kids. *Glow Kids* also includes an opt-out letter and a "quiz" for parents in the back of the book.

The first comprehensive presentation for clinicians of the groundbreaking approach popularized in Ross Greene's acclaimed parenting guide, *The Explosive Child*, this book provides a detailed framework for effective, individualized intervention with highly oppositional children and their families. Many vivid examples and Q&A sections show how to identify the specific cognitive factors that contribute to explosive and noncompliant behavior, remediate these factors, and teach children and their adult caregivers how to solve problems collaboratively. The book also describes challenges that may arise in implementing the model and provides clear and practical solutions. Two special chapters focus on intervention in schools and in therapeutic/restrictive facilities.

The Explosive Child

In a book as provocative and newsworthy as *Listening to Prozac* and *Driven to Distraction*, a physician speaks out on America's epidemic level of diagnoses for attention deficit disorder, and on the drug that has become almost a symbol of our times: Ritalin. In 1997 alone, nearly five million people in the United States were prescribed Ritalin--most of them young children diagnosed with attention deficit disorder. Use of this drug, which is a stimulant related to amphetamine, has

increased by 700 percent since 1990. And this phenomenon appears to be uniquely American: 90 percent of the world's Ritalin is used here. Is this a cause for alarm--or simply the case of an effective treatment meeting a newly discovered need? Important medical advance--or drug of abuse, as some critics claim? Lawrence Diller has written the definitive book about this crucial debate--evenhanded, wide-ranging, and intimate in its knowledge of families, schools, and the pressures of our speeded-up society. As a pediatrician and family therapist, he has evaluated hundreds of children, adolescents, and adults for ADD, and he offers crucial information and treatment options for anyone struggling with this problem. Running on Ritalin also throws a spotlight on some of our most fundamental values and goals. What does Ritalin say about the old conundrums of nature vs. nurture, free will vs. responsibility? Is ADD a disability that entitles us to special treatment? If our best is not good enough, can we find motivation and success in a pill? Is there still a place for childhood in the performance-driven America of the late nineties? From the Hardcover edition.

The Defiant Child

From the author of the groundbreaking *The Defiant Child* comes the first book to connect explosive behavior—when kids go from Jekyll to Hyde and back in the blink of an eye—with its underlying causes. Does your hitting, kicking, screaming child explode with so little provocation that you can't help but wonder if he's possessed? Are his extreme tantrums becoming the stuff of playground legend? And are you about to lose your job because his daycare or school repeatedly asks you to pick him up early? Dr. Douglas Riley's ear-to-the-ground insights will give much-needed help to desperate

parents who have one overriding question: Why does my child act like this? This compassionate yet no-nonsense therapist explains that explosive behavior is the mere tip of the iceberg. Instead of using a one-size-fits-all strategy, Dr. Riley identifies the eleven most common causes of explosions and accordingly tailors his treatment strategies to address the underlying cause of the behavior. What Your Explosive Child Is Trying to Tell You is a lifeline for parents who are at their wits' end. DR. DOUGLAS RILEY is a clinical psychologist whose practice focuses on children and adolescents who are explosive, oppositional, depressed, or have difficulties with concentration and learning. He is the author of The Defiant Child: A Parent's Guide to Oppositional Defiant Disorder as well as The Depressed Child: A Parent's Guide for Rescuing Kids.

A groundbreaking approach to understanding and parenting children who frequently exhibit severe fits of temper and other intractable behaviors, from a distinguished clinician and pioneer in this field. What's an explosive child? A child who responds to routine problems with extreme frustration--crying, screaming, swearing, kicking, hitting, biting, spitting, destroying property, and worse. A child whose frequent, severe outbursts leave his or her parents feeling frustrated, scared, worried, and desperate for help. Most of these parents have tried everything--reasoning, explaining, punishing, sticker charts, therapy, medication--but to no avail. They can't figure out why their child acts the way he or she does; they wonder why the strategies that work for other kids don't work for theirs; and they don't know what to do instead. Dr. Ross Greene, a distinguished clinician and pioneer in the treatment of kids with social, emotional, and behavioral challenges, has worked with thousands of explosive children,

and he has good news: these kids aren't attention-seeking, manipulative, or unmotivated, and their parents aren't passive, permissive pushovers. Rather, explosive kids are lacking some crucial skills in the domains of flexibility/adaptability, frustration tolerance, and problem solving, and they require a different approach to parenting. Throughout this compassionate, insightful, and practical book, Dr. Greene provides a new conceptual framework for understanding their difficulties, based on research in the neurosciences. He explains why traditional parenting and treatment often don't work with these children, and he describes what to do instead. Instead of relying on rewarding and punishing, Dr. Greene's Collaborative Problem Solving model promotes working with explosive children to solve the problems that precipitate explosive episodes, and teaching these kids the skills they lack.

Circumcision Scar

Read this blistering exposé into history's most loathed body part. Did you know amputated foreskins are sold to cosmetic companies for \$100,000, or that circumcision was alleged to cure brain tumors? It also has a history of megalomania — doctors believed it would cure black men of their predisposition to be rapists, and the more children they circumcised, the higher they'd ascend to god. Most parents circumcise their sons without giving it a second thought. They have no clue what the risks are because doctors never offer "informed consent" - the legal obligation to educate patients on the risks and alleged benefits of any procedure so they understand what's being asked of them. Circumcision facts doctors never tell parents:

- Circumcision can permanently change your son's temperament.
- Circumcision reduces

Your body your choice - His body your preference? Love your son as he was born to be, not for who you force him to be. Jay J. Jackson offers an unflinching glimpse into the debilitating mindset of circumcision related sexual trauma - the same debilitating mindset experienced by all victims of sexual violence. He details his personal experiences with foreskin restoration, medical abuse, and the shocking history behind how circumcision became commonplace in America. THE STORY BEHIND THE STORY: After suffering an unrelated trauma at the age of 1, Jay experienced parallel memories that caused him to discern he'd been in two separate hospital settings as an infant, and his inability to reconcile these conflicting memories became the impetus behind his lifelong struggle. As an adult, Jay sought treatment for erectile dysfunction only to be chased out of multiple doctor's offices that branded him immoral and perverse for suggesting circumcision is harmful. Abandoned by traditional medicine, Jay ultimately found a cosmetic surgeon willing to help and he endured 2 experimental surgeries to reverse the damage his circumcision caused. In his 50s, Jay suddenly realized his recurring nightmares were repressed memories of his neonatal circumcision, which became the impetus for writing this book. "I drew the picture on the back cover in the first grade. It's me in bed having another nightmare, surrounded by my family who were angry that I'd disturbed them again. I was in my 50s when I finally understood I was having recurring nightmares about my neonatal circumcision. Please don't do this to your son." Jay J. Implement a more constructive approach to difficult students
Lost and Found is a follow-up to Dr. Ross Greene's landmark works, *The Explosive Child* and *Lost at School*, providing educators with highly practical, explicit guidance on implementing his Collaborative & Proactive Solutions (CPS) Problem Solving model with behaviorally-challenging students. The Explosive Child

What's an explosive child? A child who responds to routine problems with extreme frustration-crying, screaming, swearing, kicking, hitting, biting, spitting, destroying property, and worse. A child whose frequent, severe outbursts leave his or her parents feeling frustrated, scared, worried, and desperate for help. Most of these parents have tried everything-reasoning, explaining, punishing, sticker charts, therapy, medication-but to no avail. They can't figure out why their child acts the way he or she does; they wonder why the strategies that work for other kids don't work for theirs; and they don't know what to do instead. Dr. Ross Greene, a distinguished clinician and pioneer in the treatment of kids with social, emotional, and behavioral challenges, has worked with thousands of explosive children, and he has good news: these kids aren't attention-seeking, manipulative, or unmotivated, and their parents aren't passive, permissive pushovers. Rather, explosive kids are lacking some crucial skills in the domains of flexibility/adaptability, frustration tolerance, and problem solving, and they require a different approach to parenting. Throughout this compassionate, insightful, and practical book, Dr. Greene provides a new conceptual framework for understanding their difficulties, based on research in the neurosciences. He explains why

traditional parenting and treatment often don't work with these children, and he describes what to do instead. Instead of relying on rewarding and punishing, Dr. Greene's Collaborative Problem Solving model promotes working with explosive children to solve the problems that precipitate explosive episodes, and teaching these kids the skills they lack.

Like Sound Through Water

An international news story when published last year, now in paperback: A historical detective story leads to dramatic and ground-breaking revelations about the life and times of Jesus. Waiting to be rediscovered in the British Library is an ancient manuscript of the early Church, copied by an anonymous monk. The manuscript is at least 1,450 years old, possibly dating to the first century. And now, *The Lost Gospel* provides the first ever translation from Syriac into English of this unique document that tells the inside story of Jesus' social, family, and political life. *The Lost Gospel* takes the reader on an unparalleled historical adventure through a paradigm shifting manuscript. What the authors eventually discover is as astounding as it is surprising: the confirmation of Jesus' marriage to Mary Magdalene; the names of their two children; the towering presence of Mary Magdalene; a previously unknown plot on Jesus' life (thirteen years prior to the crucifixion); an assassination attempt against Mary Magdalene and their children; Jesus' connection to political figures at the highest level of the Roman Empire; and a religious movement that antedates that of Paul—the Church of Mary Magdalene. Part historical detective story, part modern adventure, *The Lost Gospel* reveals secrets that have been hiding in plain sight for millennia.
