Cognitive Behaviour Therapy (CBT) is now well established  
as an effective treatment for a range of mental health  
problems, but for clinicians working with older clients, there  
are particular issues that need to be addressed. Topics  
covered include the need to build a therapeutic relationship,  
dealing with stereotypical thinking about ageing, setting  
realistic expectations in the face of deteriorating medical  
conditions, maintaining hope when faced with difficult life  
events such as the loss of a spouse, disability, etc., and

dealing with the therapist's own fears about ageing. Illustrated throughout with case studies, practical solutions and with a troubleshooting section, this is essential reading for all clinical psychologists, psychiatrists and related health professionals who work with older people. \* Authors are world authorities on depression and psychotherapy with older people \* First book to be published on CBT with older people \* Case studies and examples used throughout to illustrate the method and the problems of older people

As nurses know firsthand, the impact of psychological trauma is not limited to those who experience it. Others—including nurses and caregivers—are indirectly affected. In healthcare,

patients— psychological trauma may manifest in odd, uncomfortable, or confusing behaviors. Nurses and healthcare workers must recognize that patients may be feeling unsafe or struggling with low self-esteem, anxiety, grief, loneliness, or depression born from trauma. As nurses listen to, empathize with, and sometimes grieve with the people they care for, they need to comprehend the “why” behind these feelings and actions. The Influence of Psychological Trauma in Nursing helps nurses gain awareness and knowledge about trauma and recovery so they can heal and bring holistic healing to others. Authors Karen J. Foli and John R. Thompson provide a primer on psychological trauma, helping readers identify and understand the common forms of trauma in society. Filled with examples, tools, assessments, and learning objectives, this book helps nurses move forward as trauma-informed caregivers.

Whether we realize it or not, shame affects every aspect of our lives. But God is telling a different story. Curt Thompson unpacks the soul of shame, revealing its ubiquitous nature and neurobiological roots while providing the theological and practical tools necessary to dismantle shame. Embrace healing and wholeness as you find freedom from the negative messages that bind you.

### Epidemiologic Field Methods in Psychiatry

This volume continues the Proceedings of the Calgary History of Medicine Days series which publishes the work of young and emerging researchers in the field, hence providing a unique publishing format. The annual Calgary History of Medicine Days Conference, established in 1991, brings together undergraduate and early graduate students from across Canada, Latin America, the United States, the United Kingdom, and Europe to give paper and poster presentations on a wide variety of topics from the history of medicine and healthcare from a multiple perspectives. The History of Medicine Days offers an annual platform for discussions and exchanges between participants regarding recent research findings, methodological perspectives, and work-in progress descriptions of ongoing historiographical projects. This book explores such topics as historical medical classics, the history of medicine in Canada, the effects of war on medicine, and historical conceptions of blood and circulation. Furthermore, it includes the paper given by the conference's internationally renowned keynote speaker, Dr Thomas Schlich, Professor of History and History of Medicine at McGill University, Quebec. In addition, it gathers together all the abstracts of the conference for documentation purposes, and is well-illustrated with images and diagrams pertaining to the history of medicine.

General clinicians conduct most forensic psychiatric examinations and provide most psychiatric testimony. Yet these clinicians often receive little or no training in forensic psychiatry, leaving them ill prepared to meet the inevitable ethical and legal challenges that arise. Both timely and informative, this textbook is the first reference designed and written for both the general clinician and the experienced forensic psychiatrist. Here, 28 recognized experts introduce the forensic subjects that commonly arise in clinical practice. Unique in the literature, this outstanding collection covers □ Introductory subjects □ Organized psychiatry and forensic practice; the legal system and the distinctions between therapeutic and forensic roles; business aspects of starting a forensic practice; the role of the expert witness; the differences between the ethics of forensic and clinical psychiatry; the use of DSM in the courtroom; and issues that arise in working with attorneys □ Civil litigation □ The standard of care and psychiatric malpractice; civil competency; issues in conducting evaluations for personal injury litigation; personal injury claims of psychiatric harm; and disability determination and other employment-related psychiatric evaluations □ Criminal justice □ Competency to stand trial and insanity evaluations; the use of actuarial and clinical assessments in the evaluation of sexual offenders; psychiatry in correctional settings; and the relationship between psychiatry and law enforcement, including mental health training, crisis negotiation, and fitness for duty evaluations □ Special topics □ Assessment of malingering; evaluations of children and adolescents; violence risk assessments; the use of prediction instruments to determine "dangerousness"; and the

evolving standard of expert psychological testimony Each chapter is organized around case examples and includes a review of key concepts, practical guidelines, and references for further reading. A study guide is also available for use in teaching, in studying, and in preparing for the forensic board examination. This practical textbook makes this interesting specialty accessible to trainees and seasoned practitioners. With its detailed glossary of legal terms, subject index, and index of legal cases, it will be a welcome addition to all psychiatric residency and forensic fellowship programs.

Epidemiologic Field Methods in Psychiatry: The NIMH Epidemiologic Catchment Area Program focuses on the methodology employed in the National Institute of Mental Health (NIMH) Epidemiologic Catchment Area (ECA) Program. The selection first elaborates on the historical context, major objectives, and study design and sampling the household population. Topics include the development of the ECA program, DIS instrument, program design, general issues in sampling community resident populations, household and respondent eligibility, household and respondent selection, weighting, and variance estimation. The manuscript then examines institutional survey and the characteristics, training, and field work of interviewers. Discussions focus on the changing nature of institutions, value of the institutional component, institutions included in institutional stratum, interviewer recruitment and selection, demographic characteristic of interviewers, and field work. The publication ponders on nonresponse and nonresponse bias in the ECA surveys, data preparation, and proxy interview, as well as quality of proxy data, item nonresponse,

editing and coding, data entry and data cleaning, understanding nonresponse, and assessment of evidence for nonresponse bias. The selection is a valuable source of information for psychiatrists and readers interested in the Epidemiologic Catchment Area (ECA) Program.

## Cognitive Behaviour Therapy with Older People

A fascinating text that addresses the clinical and educational challenges of treating psychiatric patients from a truly multidisciplinary perspective using a case-based format, *Approach to the Psychiatric Patient: Case-Based Essays* is the only book of its kind and an indispensable addition to the mental health practitioner's library. The new edition builds upon the strengths that distinguished the first, with composite cases that are carefully constructed to capture real-world problems, followed by essays that provide clear and cogent perspectives on the case. These essays cover a wide range, from the more conventional (such as differential diagnosis of anxiety or the clinical characteristics of delirium) to the unusual and intriguing (such as creativity and mental illness or an analysis of the case in relation to the classic, *Strange Case of Dr. Jekyll and Mr. Hyde*). Every chapter has been revised, and the book boasts many new co-contributors, as well as the addition of completely new essays. For example, in the chapter on geriatric depression, several new essays have been added on the topics of collaborative care and the embedded psychiatrist, depression and medical illness, and biomarkers to identify depression subtypes, while the chapter on terminal illness features new essays on spirituality and meaning-centered therapy. In addition, there are new essays on co-occurring anxiety and alcohol use disorders, medication assisted treatment for stimulant use, treatment of body

dysmorphic disorder, and more. The text possesses many useful attributes for the reader: The more than 100 essays were written by a broad range of specialists, each with particular expertise in their aspect of the case, and the resulting commentary is focused and concise. In addition to the case and discussions, each chapter offers an overview and summary points designed to facilitate further consideration of the patient and clinical situation and to focus on the key points. The book's unique structure enhances its flexibility, allowing the reader to read a case and accompanying essays straight through, or to pick and choose as the need or whim arises. The cases' clinical settings are diverse, ranging from inpatient hospitalizations and emergency room evaluations to outpatient assessments and long-term psychotherapies, maximizing relevance and resonance. Each essay has its own bibliography, which provides both rigorous documentation and additional sources for more exploration of the topic. Approach to the Psychiatric Patient: Case-Based Essays distinguishes itself from prior texts in both the richness of its cases and the ingenuity of its format, and its multidisciplinary wisdom and insight will be appreciated by a wide range of readers.

Representing a new wave of research and analysis on Nazi human experiments and coerced research, the chapters in this volume deliberately break from a top-down history limited to concentration camp experiments under the control of Himmler and the SS. Instead the collection positions extreme experiments (where research subjects were taken to the point of death) within a far wider spectrum of abusive coerced research. The book considers the experiments not in isolation but as integrated within wider aspects of medical provision as it became caught up in the Nazi war economy, revealing that researchers were opportunistic and retained considerable

autonomy. The sacrifice of so many prisoners, patients and otherwise healthy people rounded up as detainees raises important issues about the identities of the research subjects: who were they, how did they feel, how many research subjects were there and how many survived? This underworld of the victims of the elite science of German medical institutes and clinics has until now remained a marginal historical concern. Jews were a target group, but so were gypsies/Sinti and Roma, the mentally ill, prisoners of war and partisans. By exploring when and in what numbers scientists selected one group rather than another, the book provides an important record of the research subjects having agency, reconstructing responses and experiential narratives, and recording how these experiments – iconic of extreme racial torture – represent one of the worst excesses of Nazism.

"A Psychiatrist's Guide to Advocacy explores the diverse conditions that may demand an in-tervention or affirmative response from mental health practitioners charged with advocating for patients and the profession. The editors and authors argue for a greater culture of advo-cacy among psychiatrists to effect broad and lasting changes, emphasizing that advocacy takes many forms (e.g., organizational, patient-level, legislative, media, education). The au-thors identify systemic problems in mental health care, describe the essential factors needed for effective advocacy, and delineate the advocacy needs of diverse patient populations (e.g., children and families, older adults, LGBTQ patients, veterans)"--

While the coerced human experiments are notorious among all the atrocities under National Socialism, they have been marginalised by mainstream historians. This book seeks to remedy the marginalisation, and to place the experiments in the context of the broad history of National Socialism and the Holocaust. Paul Weindling bases this study on the reconstruction of a victim group through individual victims' life histories, and by weaving the victims' experiences collectively together in terms of different groupings, especially gender, ethnicity and religion, age, and nationality. The timing of the experiments, where they occurred, how many victims there were, and who they were, is analysed, as are hitherto under-researched aspects such as Nazi anatomy and executions. The experiments are also linked, more broadly, to major elements in the dynamic and fluid Nazi power structure and the implementation of racial policies. The approach is informed by social history from below, exploring both the rationales and motives of perpetrators, but assessing these critically in the light of victim narratives.

During the long twentieth century, explorers went in unprecedented numbers to the hottest, coldest, and highest points on the globe. Taking us from the Himalaya to Antarctica and beyond, Higher and Colder presents the first history of extreme physiology, the study of the human body at its physical limits. Each chapter explores a seminal question in the history of science, while also showing how the apparently exotic locations and experiments contributed to broader political and social shifts in twentieth-century scientific thinking. Unlike most books on modern biomedicine, Higher and Colder focuses on fieldwork, expeditions, and exploration, and in doing so provides a welcome alternative to laboratory-dominated accounts of the history of modern life sciences. Though centered on male-dominated practices--science and exploration--it recovers the stories of women's contributions that were sometimes accidentally, and sometimes deliberately, erased. Engaging and provocative, this book is a history of the scientists and physiologists who face challenges that are physically demanding, frequently dangerous, and sometimes fatal, in the interest of advancing modern science and pushing the boundaries of human ability.
