Coordination chemistry, as we know it today, has been shaped by major figures from the past, one of whom was Joseph Chatt. Beginning with a description of Chatt's career presented by co-workers, contemporaries and students, this fascinating book then goes on to show how many of today's leading practitioners in the field, working in such diverse areas as phosphines, hydrogen complexes, transition metal complexes and nitrogen fixation, have been influenced by Chatt. The reader is then brought right up-to-date with the inclusion of some of the latest research on these topics, all of which serves to underline Chatt's continuing legacy. Intended as a permanent record of Chatt's life, work and influence, this book will be of interest to lecturers, graduate students, researchers and science historians.

Part of a series of texts, *Active Experiences for Active Children: Science, Third Edition*, is unique to the market by providing a theoretical foundation for teaching science to preschoolers and primary-grade children alongside meaningful, standards-based, constructivist, hands-on learning "experiences" to guide teachers in their practice. Organized around the National Science Education Standards and the Benchmarks for Science Literacy, the text consists of clear, concise, usable guides for planning meaningful learning experiences in science for children in childcare settings, preschool programs, Head Start and other federally funded programs, and kindergarten. Primary-grade children should be engaged in active experiential learning as well, and each experience is extended to the early primary grades (grades 1-3). The experiences in this book are meaningful because they:

- are grounded in children's interests and needs in their here-and-now world.
- have integrity in terms of content key to science.
- involve children in group work, investigations, or projects based on inquiry learning.
- have continuity: One experience builds on another, forming a complete, coherent, integrated learning curriculum for young children as well as connecting the early childhood setting to children's homes and

communities. - provide time and opportunity for children to think and reflect on their experiences. - provide the teacher with the opportunity to document and assess children's learning. Organized to address a variety of audiences, the text is formatted in two parts: Part One offers a foundation for young children and science; Part Two offers thematic based units full of resources for teachers, teacher strategies, and inquiry-based experiences for children. The content has been expanded in the third edition to include a new chapter on engaging children with the natural world (Chapter 14), references to the most recent reports on science education from the National Academies, updated and expanded lists of books and Web sites for children and adults, and new activities. This highly- readable, user-friendly series text is formatted with an engaging, conversational style that will connect and resonate with its varied readers.
