The best handbook on chart usage, from one of the most trusted names in boating In 2000, the U.S. government ceased publication of Chart No. 1, the invaluable little book that generations of mariners have consulted to make sense of the complex system of signs, symbols, and graphic elements used in nautical charts. Now Chart No. 1 is not just reborn but expanded and improved in How to Read a Nautical Chart. The demand for a book like this has never been greater. Arranged and edited by Nigel Calder, one of today's most respected boating authors, --and containing four-color illustrations throughout,-- How to Read a Nautical Chart presents a number of original features that help readers make optimum use of the data found in Chart No. 1, including a more intuitive format, crucial background information, international chart symbol equivalents, electronic chart symbology, and thorough explanations of the practical aspects of nautical chart reading.

Although the primary audience for this book is undergraduate university students studying naval architecture and marine engineering, the content will certainly be of interest to most designers working with high-speed craft. Author Donald L Blount says, "My intent has been to share the technical information, decision criteria, rules of thumb, and the opinionated experiences which have helped me in making choices for developing marine craft intended to operate beyond displacement speeds." According to Blount, Chapter One is a reprise of his article "Original Speed," (Professional BoatBuilder magazine, June/July 2008) followed by nine chapters of "science, my skewed views of science, a few things I don't understand, definitions of things on which no two naval architects will agree, design criteria which have been my friend, and guidance on design procedures embracing technology." This book also includes numerous graphs, charts, tables, and formulas to clarify the material in the text. He encourages you to personalize your copy with your own notes to make it even more valuable as a reference source

and has included ample space for adding comments. ABOUT THE AUTHOR: Donald L Blount is the founder of Donald L. Blount and Associates, Inc. (Chesapeake, Virginia). During his 50-plus year career, he has designed numerous noteworthy vessels including the 67.7 m (222 ft) Destriero, which holds the non-refueled Atlantic crossing record, set in 1992 with an average speed of 53.1 knots earning the coveted Blue Ribband shown here. Registered as a professional engineer in two states, Blount is a fellow of both SNAME and RINA. He has served as Head of the Department of the U.S. Navy's Combatant Craft Engineering Department and also was employed at the David Taylor Model Basin. He has co-authored more than 50 papers and articles.

I'm known as Bob423 along the Atlantic Intracoastal Waterway (ICW) and this September will be my tenth trip down the ICW to Key West. This edition consists of only the charts for those who are experienced ICW Cruisers and already know all the basics and desire no additional input on getting ready for the trip south or in outfitting your boat or apps to use. Also not included are the chapters on Basic ICW Knowledge and ICW University where I go more in depth on topics of interest to cruisers. All charts have been updated and redone with Aqua Map's rendition of the Army Corps of Engineers (USACE) survey charts that include my track through the over 100 shallow areas in a blue dotted line and in many cases, a GPX route too so you will know exactly how to safely proceed. Each of the 12 legs of the trip south to Key West is now introduced with a wide area chart showing the hazards ahead with mile markers for planning a day's cruise. GPX routes and tracks have been greatly expanded as further navigation aids. If you buy the paperback book the eBook will be free again this year. It has all the active links so you don't have to look up any of the recommendations I reference in the paperback. I will also publish a page by page list of active links on my blog site at fleetwing.blogspot.com if for some reason you don't want to download the eBook. Thanks for considering the purchase of my guide. The links have been left in blue to show they can be accessed in the eBook with a tap. Please leave a review on Amazon.com. All reviews are helpful to other boaters considering a trip down the ICW.

"Until now there has never been a comprehensive ship's biography of the last survivor of America's new steel navy of the Spanish-American War era. The protected cruiser Olympia was constructed as part of a congressionally-mandated program to build a modern fleet prior to the turn of the century. Designed for the Asiatic Squadron, she became famous as Adm. George Dewey's flagship at the Battle of Manila Bay and later returned the body of the Unknown Soldier from France after World War I. Today the Olympia displays her traditional garb of buff and white as a naval shrine at Penn's Landing on the Delaware River in Philadelphia, Pennsylvania."--BOOK JACKET.
