Greenways for America

This consolidated reprint of three pamphlets by Mr. David Dobson endeavors to shed light on some 1,000 Irish men and women and their families who emigrated to North America between roughly 1775 and 1825. In the majority of cases, the lists provides us with most of the following particulars: name, date of birth, name of ship,

occupation in Ireland, reason for emigration, sometimes place of origin in Ireland, place of disembarkation in the New World, date of arrival, number of persons in the household, and the source of the information. This volume is the first in a three-volume series by Mr. Dobson on early Irish emigration to America.

From its headwaters on the southern slope of the Tennessee Valley divide near Dahlonega to its confluence with the Oostanaula to form the Coosa in Rome, the Etowah is a river full of interesting surprises. Paddle over Native American fish weirs and past the Etowah Indian Mounds, one of the most intact Mississippian Culture sites in the Southeast. See the quarter-mile tunnel created to divert the Etowah during Georgia ' s gold rush and the pilings from antebellum bridges burned in the Civil War. This guide offers all the information needed for even novice paddlers to feel comfortable jumping in a boat and heading downstream, including detailed, accurate maps; put in/take out and optimal river flow information; mile-by-mile points of interest; and an illustrated natural history guide to help identify animals and plants commonly seen in and around the river. A fishing primer offers tips to understand the habits of some of the many native fish species found in the Etowah, from trout in the river ' s upper reaches to bass and bream in the midsection and catfish and drum below Lake Allatoona. Along the way, river explorers will come to understand the threats facing this unique Georgia place, and the guide offers suggestions for how to take action to help protect the Etowah and keep its beauty and biodiversity safe for future explorers. Covering thousands of miles of Georgia's waterways, Canoeing & Kayaking Georgia is the definitive guide to Georgia's whitewater to wilderness swamps--and everything in between. This updated edition incorporates the exhilarating new urban whitewater course in Columbus, and the recently established water trails that actively welcome recreational paddlers throughout the state. Now expanded to cover more waterways in Southwest Georgia--Kinchafoonee, Muckalee, and Ichawaynochaway Creeks--you only need one book to figure out where to float, no matter what type of boat you paddle.

Esri Map Book

North Georgia has more than forty lakes, and not one is natural. The state's controversial decision to dam the region's rivers for power and water supply changed the landscape forever. Lost communities, forgotten crossroads, dissolving racetracks and even entire towns disappeared, with remnants occasionally peeking up from the depths during times of extreme drought. The creation of Lake Lanier displaced more than seven hundred families. During the construction of Lake Chatuge, busloads of schoolboys were brought in to help disinter graves for the community's cemetery relocation. Contractors clearing land for the development of Lake Hartwell met with seventy-eight-year-old Eliza Brock wielding a shotgun and warning the men off her property. Lisa Russell dives into the history hidden beneath North Georgia's lakes.

Lizet, a daughter of Cuban immigrants and the first in her family to graduate from high school, secretly applies and is accepted to an ultra-elite college. Her parents are furious at her decision to leave Miami, and amid a painful divorce, her father sells her childhood home, leaving Lizet, her mother, and older sister, a newly single mom--without a steady income and scrambling for a place to live. Amidst this turmoil, Lizet begins college, but the privileged world of the campus feels utterly foreign to her, as does her new awareness of herself as a minority. Struggling both socially and academically, she returns home for a Thanksgiving visit, only to be overshadowed by the arrival of Ariel Hernandez, a young boy whose mother died fleeing with him from Cuba on a raft. The ensuing immigration battle puts Miami in a glaring spotlight, captivating the nation and entangling Lizet's entire family. Pulled between life at college and the needs of those she loves, Lizet is faced with hard decisions that will change her life forever. Her urgent, mordantly funny voice leaps off the page to tell this moving story of a young woman torn between generational, cultural, and political forces; it's the new story of what it means to be American today.

This publication is based on previous documentation of the nationally standardized Forest Inventory and Analysis database (Hansen and others 1992; Woudenberg and Farrenkopf 1995; Miles and others 2001). Documentation of the structure of the Forest Inventory and Analysis database (FIADB) for Phase 2 data, as well as codes and definitions, is provided. Examples for producing population level estimates are also presented. This database provides a consistent framework for storing forest inventory data across all ownerships for the entire United States. Forest Inventory and Analysis (FIA) is a continuing endeavor mandated by Congress in the Forest and Rangeland Renewable Resources Planning Act of 1974 and the McSweeney-McNary Forest Research Act of 1928. FIA's primary objective is to determine the extent, condition, volume, growth, and depletion of timber on the Nation's forest land. Before 1999, all inventories were conducted on a periodic basis.

Access Free Oconee River Users Guide Georgia River Network Guidebooks Ser

The passage of the 1998 Farm Bill requires FIA to collect data annually on plots within each State. This kind of up-to-date information is essential to frame realistic forest policies and programs. USDA Forest Service regional research stations are responsible for conducting these inventories and publishing summary reports for individual States. In addition to published reports, the Forest Service provides data collected in each inventory to those interested in further analysis. This report describes a standard format in which data can be obtained. This standard format, referred to as the Forest Inventory and Analysis Database (FIADB) structure, was developed to provide users with as much data as possible in a consistent manner among States. A number of inventories conducted prior to the implementation of the annual inventory are available in the FIADB. However, various data attributes may be empty or the items may have been collected or computed differently. Annual inventories use a common plot design and common data collection procedures nationwide, resulting in greater consistency among FIA work units than earlier inventories. Data field definitions note inconsistencies caused by different sampling designs and processing methods.

North America Before the European Invasions tells the histories of North American peoples from first migrations in the Late Glacial Age, sixteen thousand years ago or more, to the European invasions following Columbus ' s arrival. Contrary to invaders ' propaganda, North America was no wilderness, and its peoples had developed a variety of sophisticated resource uses, including intensive agriculture and cities in Mexico and the Midwest. Written in an easy-flowing style, the book is a true history although based primarily on archeological material. It reflects current emphasis within archaeology on rejecting the notion of " pre " -history, instead combining archaeology with post-Columbian ethnographies and histories to present the long histories of North America ' s

native peoples, most of them still here and still part of the continent ' s history.

Paddling Georgia

On that July evening in 1946, the leader counted aloud and the mob of white men fired. Seconds later, the leader counted again, "One, two, three," and the mob fired once more. After the third and final volley of gunshots, the white men got into their cars and drove off, leaving the bullet-ridden bodies of two young black men and two young black women lying in the dirt near Moore's Ford Bridge in rural Walton County, Georgia. Since that summer evening, there have never been as many victims lynched in a single day in America. Now, more than a half century later, Laura Wexler offers the first full account of the Moore's Ford lynching, a murder so brutal it stunned the nation and motivated President Harry Truman to put civil rights at the forefront of his national agenda. With the style of a novelist, the authority of a historian, and the tenacity of a journalist, Wexler recounts the lynching and the resulting four-month FBI investigation. Drawing from interviews, archival sources, and an uncensored FBI report, she takes us deep into the landscape of 1946 Georgia, creating unforgettable portraits of sharecroppers, sheriffs, bootleggers, the victims, and the men who may have killed them. *Fire in a Canebrake* pursues the legacy of the Moore's Ford lynching into the present, exploring the conflicting memories of Walton County's black and white citizens and examining the testimony of a white man who claims he was a secret witness to the crime. In 2001, the governor of Georgia issued a new reward for information leading to the arrest of the lynchers. Several suspects named in the FBI's 1946 investigation are still alive, and there is no statute of limitations on the crime of murder. *Fire in a Canebrake* -- a phrase local people used to describe the sound of the fatal gunshots -- is a moving and often frightening tale of violence, sex,

and lies. It is also a disturbing snapshot of a divided nation on the brink of the civil rights movement and a haunting meditation on race, history, and the struggle for truth.

Mollusks have been important to humans since our earliest days. Initially, when humans were primarily interested in what they could eat or use, mollusks were important as food, ornaments, and materials for tools. Over the centuries, as human knowledge branched out and individuals started to study the world around them, mollusks were important subjects for learning how things worked. In this volume, the editors and contributors have brought together a broad range of topics within the field of malacology. It is our expectation that these topics will be of interest and use to amateur and professional malacologists.

History of Greene County, Georgia, 1786-1886

Completely revised and updated to address changes in technology, this new edition is the definitive guide to the art and science of sailing. Since the publication of the widely hailed first edition in 1983, *The Annapolis Book of Seamanship* has set the standard by which other books on sailing are measured. Used throughout America as a textbook in sailing schools and Power Squadrons, *The Annapolis Book of Seamanship* thoroughly and clearly covers the fundamental and advanced skills of modern sailing. This edition of *Annapolis* is a major overhaul. Over half the book has been revised; old topics and features have been updated, and many new ones have been introduced. The design has been modernized, and many color illustrations have been added. As big and detailed as *Annapolis* is, the wealth of technical information (including dozens of step-by-step instructions) is presented here in a way that is

Access Free Oconee River Users Guide Georgia River Network Guidebooks Ser

uniquely readable; it's both useful and easy to use. This is because John Rousmaniere and artist Mark Smith bring to Annapolis decades of experience both as sailors and as professional communicators. Annapolis emphasizes the standard skills and proven methods that eliminate error and confusion, ensure security in emergencies, and allow every sailor more time for enjoyment on the water. Much has changed on the water since 1983 when this book was originally published. Black buoys are now green, the Global Positioning Satellite navigation system (GPS) is almost universally used, new types of anchors and sails have appeared, safety skills and gear are vastly improved, many more women are commanding boats, and catamarans and trimarans are common where only monohulls used to sail. But for all these modern developments, the basic skills and spirit of sailing have not changed at all. Sail trimming, keeping up steerageway, maintaining the dead reckoning plot, heaving-to -- these fundamentals are as important now as ever and receive much attention here. Among the innovations in this edition are:

- * Basic skills in early chapters: Fundamental sailing and boat-handling skills and gear, which are introduced in chapters 1, 2, and 3.
- * "Hands On" segments: Three dozen special sections, each devoted to a particular seamanship problem and an expert solution.
- * More how-to tips: Additional rules of thumb that guide a crew quickly and successfully through seamanship problems.
- * New coverage of multihulls: Advice on evaluating, anchoring, and handling catamarans and trimarans under sail (including in storms).
- * More on emergencies: New material on emergencies, safety, and heavy-weather sailing, including a section on preparing a docked boat for a hurricane.
- * Equipment updates: Expanded coverage of the use and care of modern gear and hardware, including radar, GPS, rescue devices, and asymmetrical spinnakers.
- * Terminology: Full definition and illustration of major terms when they're first introduced, with alternative language provided in parentheses.
- * Gender: The use of feminine personal pronouns, which reflect the fact that more

women are captaining and sailing boats than ever before. From navigation and seamanship to boat and gear maintenance, from pleasure cruising to heavy-weather sailing, here is the definitive, state-of-the-art guide that provides systematic step-by-step techniques to see you through every situation on deck and in the cockpit.

Nestled between the Pine Mountains and plentiful Flint River, Pike County and its county seat were named after army general and adventurer Zebulon Pike. Early settlers, as adventurous and independent as the county's famed namesake explorer, built homes and raised families extending for generations in the gently rolling acres of central Georgia. Many residents became well known across the state. Austin Dabney, freed slave and Revolutionary War hero, supported the white family who nursed him to health after a crippling battle wound. Journalist Jacques "Jackie" Futrelle became a famous novelist and playwright before losing his life on the Titanic. After training World War I pilots, early aviator Doug Davis returned home to build the first hangar at Atlanta's airport, to make countless barnstorming trips, and to win early racing and aerobatic competitions. Generations of men and women raised families and

worked in the fields, orchards, turkey farms, country groceries, and busy canneries, cotton gins, and packing plants. Some served in the military or carried on family traditions like the Jugtown potters. Reliable estimates of streamflow characteristics are needed for planning, design, and operation of works for providing water supplies and for protection from flooding. This book brings together some of the most useful estimation methods - those that are simple, practical, and require only commonly available or readily obtainable data, and which give results comparable in accuracy with those derived from more sophisticated methods. The author describes how streamflow data are collected, how the characteristics are computed, how they are changed by man's activities, and how they are used in planning and design. Chapters describing statistical principles and techniques, and the effects of various climatic and physiographic factors on streamflow are included. The analytical methods are described in sufficient detail that the reader can apply them to his data. Further applications and other techniques are referred to in bibliographies.

patterns, weather patterns, locating the bait, water clarity, and wildlife and how it can help anglers. The popularity of fishing for striped bass in freshwater is growing quickly, especially as global warming allows the fish to live in waters that used to be too cold. This is the first major book on the subject, one that is sure to be part of a big trend among fly fishers. Cowen carefully outlines fishing tactics, along with detailed photographs of the steps involved, covering: Retrieving a striper Fishing a point, uphill and downhill Working a topwater fly (constant retrieve) Hooking a fish (strip strike) Fishing a hump Fishing a saddle or blow-through Fishing a breakwater Using the countdown method Fishing a deep hole in a river Fishing a creek in a river And much more! Cowen also takes a close look at freshwater striped bass, explaining how natural and stocked fisheries are managed as well as the difference between the various species. Along with help choosing equipment and some notes on wading tactics, anglers will have everything they need to improve their fishing techniques or make a start on this popular all-American outdoor sport.

the Middle Oconee. From there, the Oconee courses 220 miles through east-central Georgia to meet the Ocmulgee convergence near Lumber City, forming the Altamaha River, which flows to the Atlantic Ocean. As the Oconee ' s importance as a recreational amenity has grown over the years, University of Georgia students and instructors, the Altamaha Riverkeeper, Georgia River Network, Upper Oconee Watershed Network, and the North Oconee River Greenway have worked together to create a plan for water trails and recreational trails along the river as it flows through Athens. In the Oconee River User ' s Guide, both novice and experienced water sports enthusiasts will find all the information required to enjoy the river, including detailed maps, put in and take out suggestions, fishing and camping locations, mile-by-mile points of interest, and an illustrated guide to the animals and plants commonly seen in and around the river.
