This collection of papers offers an alternative to mainstream functional linguistics on two points. Especially in American linguistics, function and structure are often viewed almost as polar opposites; in

addition, structure is often understood as being only a matter of linguistic form — or expression — as opposed to content. The book tries to illustrate why function and structure must be understood as mutually dependent in relation to language — and why the most interesting aspect of language structure is the way it structures the content side of language. In this, the book represents a reaffirmation of traditional concerns in structural linguistics, especially with respect to the structural integrity of individual languages — but with a reversal of traditional priority: structure is not autonomous, but must be understood on the basis of function. Without being hostile to typological and universal generalizations, the articles suggest that similarities between languages can only be responsibly discussed on the basis of an understanding that includes a respect for language differences. The book contains discussions of a number of different languages including Nahuatl, Danish Sign Language, French, and Tlapanec, and focuses on the way meaning is organized in the grammar of Danish. A final section sums up theoretical perspectives.

Paddling the Northern Forest Canoe Trail: A Journey Through New England History

In the early 1900s, William Rockefeller of Standard Oil, one of the world's wealthiest, most powerful businessmen, decided to purchase a vast estate in the Adirondack Mountains of northern New York State. The land he wanted consisted of traditional hunting and fishing grounds vital to settlers who had lived in the mountains for generations. He purchased more than 50,000 acres and allowed no trespassing on his property. To complete his estate, Rockefeller needed to remove the village of Brandon, which stood in his way. Most of the residents left or were coerced by Rockefeller into leaving. A variety of aggressive, onerous tactics were used to drive the people of Brandon from their homes. A diminutive lumberjack named Oliver Lamora resisted, and for a decade the two men battled in the forest and in the courts of New York State. The confrontation grew into a fight for control of the Adirondacks, and was followed by newspapers from coast to coast. Threats, violence, arson, and murder all played a role in the struggle. It pitted wealthy outsiders against poor mountain natives, and the two main protagonists, Rockefeller and Lamora, were portrayed as a modern-day version of David and Goliath. This is the uplifting, true story of a pioneer woodsman's heroic battle against incredible odds.

"Ancient records of canoes are found from the Pacific Northwest to the coast of Maine, in Minnesota and Mexico, in the Southeast, and across the Caribbean. And if a native of those distant times might

encounter a canoe of our day, whether birch bark or dugout or a modern marvel made of carbon fiber, its silhouette would be instantly recognizable. This is the story of that singular American artifact, so little changed over time: of canoes, old and new, the people who made them, and the labors and adventures they shared. With features of technology, industry, art, and survival, the canoe carries us deep into the natural and cultural history of North America. "--

the surgeon in a later stage of disease. Consequently, they are more often in an increasingly serious state or in advanced age with significant comorbidities. In order to meet the requirements of these different patient groups, cardiosurgical treatments require special protectional strategies for the heart in order to perform the planned operations safely. This book presents the latest knowledge of modern techniques of myocardial protection taking into consideration the different patient groups and current scientific strategies. History of the Ottawa and Chippewa Indians of Michigan

Award-winning nature author Jerry Dennis reveals the splendor and beauty of North America's Great Lakes in this "masterwork"* history and memoir of the essential environmental and economical region shared by the United States and Canada. No bodies of water compare to the Great Lakes. Superior is the largest lake on earth, and together all five contain a fifth of the world's supply of standing fresh water. Their ten thousand miles of shoreline border eight states and a Canadian province and are longer than the entire Atlantic and Pacific coasts of the United States. Their surface area of 95,000 square miles is

greater than New York, New Jersey, Connecticut, Massachusetts, Vermont, New Hampshire, and Rhode Island combined. People who have never visited them—who have never seen a squall roar across Superior or the horizon stretch unbroken across Michigan or Huron—have no idea how big they are. They are so vast that they dominate much of the geography, climate, and history of North America, affecting the lives of tens of millions of people. *The Living Great Lakes: Searching for the Heart of the Inland Seas* is the definitive book about the history, nature, and science of these remarkable lakes at the heart of North America. From the geological forces that formed them and the industrial atrocities that nearly destroyed them, to the greatest environmental success stories of our time, Superior, Michigan, Huron, Erie, and Ontario are portrayed in all their complexity. A Michigan native, Jerry Dennis also shares his memories of a lifetime on or near the lakes, including a six-week voyage as a crewmember on a tallmasted schooner. On his travels, he collected more stories of the lakes through the eyes of biologists, fishermen, sailors, and others he befriended while hiking the area's beaches and islands. Through storms and fog, on remote shores and city waterfronts, Dennis explores the five Great Lakes in all seasons and moods and discovers that they and their connecting waters—including the Erie Canal, the Hudson River, and the East Coast from New York to Maine—offer a surprising and bountiful view of America. The result is a meditation on nature and our place in the world, a discussion and cautionary tale about the future of water resources, and a celebration of a place that is both fragile and robust, diverse, rich in history and wildlife, often misunderstood, and worthy of our attention. “This is history at its best and adventure richly described.”—*Doug Stanton, author of *In Harm's Way: The Sinking of the U.S.S. Indianapolis and the Extraordinary Story of Its Survivors* and *12 Strong: The Declassified True Story of the Horse Soldiers Sigurd Olson Nature Writing Award Winner Winner of Best Book of 2003* by the Outdoor Writers Association of America
