Planet of the Apes After the Fall Omnibus

Was Darwin wrong when he traced our origins to Africa? The Real Planet of the Apes makes the explosive claim that it was in Europe, not Africa, where apes evolved the most important hallmarks of our human lineage. In this compelling and accessible book, David Begun, one of the world's leading paleoanthropologists, transports readers to an epoch in the remote past when the Earth was home to many migratory populations of ape species. Begun draws on the latest astonishing discoveries in the fossil record, as well as his own experiences conducting field expeditions, to offer a sweeping evolutionary history of great apes and humans. He tells the story of how one of the earliest members of our evolutionary group evolved from lemur-like monkeys in the primeval forests of Africa. Begun then vividly describes how, over the next ten million years, these hominoids expanded into Europe and Asia and evolved climbing and hanging adaptations, longer maturation times, and larger brains. As the climate deteriorated in Europe, these apes either died out or migrated south, reinvading the African continent and giving rise to the lineages of African great apes, and, ultimately, humans. Presenting startling new insights, The Real Planet of the Apes fundamentally alters our understanding of human origins.

Planet of the Apes/Green Lantern

Astronauts Taylor, Landon and Dodge are in deep hibernation when their spaceship crashes into a lake on an unknown planet after a light-speed voyage. They discover their fourth crew mate, Stewart, dead due to a malfunction. The three abandon their ship when it starts sinking; Taylor remains on board long enough to see that the date is November 25, 3978, two thousand and six years after their departure in 1972. The astronauts set off through a desolate wasteland and discover an oasis in the desert, ignoring eerie scarecrow-like figures around the edge. Their clothes are stolen while they take a swim. The astronauts pursue the thieves, finding their clothes torn to shreds and their supplies pillaged as the perpetrators, a group of mute primitive humans, raid a cornfield. Taylor is shot in the throat and captured by armed gorillas, along with the primitive humans. Dodge is killed and Landon rendered unconscious in the chaos. Taylor is taken to Ape City where he is saved after a blood transfusion administered by two chimpanzees: animal psychologist Zira and surgeon Galen. However, Taylor's throat injury renders him temporarily unable to speak. Taylor is placed with one of the captive primitive humans, whom he later names Nova. He observes the enhanced society of talking apes and in a strict caste system: the gorillas serving as military forces and labourers; the orangutans overseeing the affairs of government and religion; and intellectual chimpanzees being mostly scientists and doctors. While their society is a theocracy similar to the beginnings of the human Industrial Era, the apes consider the primitive humans as vermin. Humans are hunted, either killed outright, enslaved, or used in scientific experiments. Taylor convinces Zira of his intelligence as she and her fianc Cornelius, an archaeologist, take an interest in him. Dr. Zaius, their orangutan superior, learns of this and arranges for Taylor to be castrated. Taylor escapes and finds Dodge's stuffed corpse on display in a museum. When Taylor is recaptured, he suddenly regains his speaking abilities and much to the amazement of the onlookers, he shouts: "Take your stinking paws off me, you damn dirty ape!"

Planet of the Apes: Tales from the Forbidden Zone

Based on the original screenplay for Planet of the Apes by *The Twilight Zone*'s Rod Serling. On the road to making the landmark science-fiction classic, 20th Century Fox commissioned Rod Serling to adapt the source material. Serling's first draft, which was drastically revised before filming, is a radically different vision of the franchise than the one the world has come to know and love. Now, for the first time in any medium, that vision is fully realized as a graphic novel with *Planet of the Apes: Visionaries* from acclaimed actor/comedian/writer Dana Gould (*The Simpsons*) and Chad Lewis (*Avengers Origins*). This is the world you know from the acclaimed Planet of the Apes film series, but with key differences - Taylor is Thomas, and Ape City isn't a crude, primitive grouping of huts; instead, it's a bustling and urbane metropolis filled with cars and skyscrapers and a vibrant Ape culture. In a world where Apes wear modern clothes, drive modern cars and rule the late night talk show scene, the arrival of one man will forever change how Apes – and Humans – view themselves.

Planet of the Apes

What makes humans different from other animals, what humans are entitled to do to other species, whether time travel is possible, what limits should be placed on science and technology, the morality and practicality of genetic engineering--these are just some of the philosophical problems raised by Planet of the Apes. Planet of the Apes and Philosophy looks at all the deeper issues involved in the Planet of the Apes stories. It covers the entire franchise, from Pierre Boulle's 1963 novel *Monkey Planet* to the successful 2012 reboot *Rise of the Planet of the Apes*. The chapters reflect diverse points of view, philosophical, religious, and scientific. The ethical relations of humans with animals are explored in several chapters, with entertaining and incisive observations on animal intelligence, animal rights, and human-animal interaction. Genetic engineering is changing humans, animals, and plants, raising new questions about the morality of such interventions. The scientific recognition that humans and chimps share 99 percent of their genes makes a future in which non-human animals acquire greater importance a distinct possibility. Planet of the Apes is the most resonant of all scientific apocalypse myths.
