Principles of Pharmacology

Using the classic images of physician-artist Frank H. Netter, as well as other talented artists, this book offers a unique visual approach to learning the basic principles of pharmacology. Classified by specific organ systems, each chapter shows how drugs are used for specific disorders of that system. The authors also include clear, concise notes under each image, highlighting the important elements of each principle.

Pharmacology

This primary textbook for a first course in pharmacology offers an integrated, systems-based, and mechanism-based approach to understanding drug therapy. Each chapter focuses on a target organ system, begins with a clinical case, and incorporates cell biology, biochemistry, physiology, and pathophysiology to explain how and why different drug classes are effective for diseases in that organ system. Over 400 two-color illustrations show molecular, cellular, biochemical, and pathophysiologic processes underlying diseases and depict targets of drug therapy. Each Second Edition chapter includes a drug summary table presenting mechanism, clinical applications, adverse effects, contraindications, and therapeutic considerations. New chapters explain how drugs produce adverse effects and describe the life cycle of drug development. The fully searchable online text and an image bank are available on thePoint.
