With his new title, em>Flash, Lenny Kravitz makes his mark in a new arena of the creative arts. During his childhood, Kravitz was enthralled by cameras, playing with them like toys instead of taking photographs. In recent years photographer friends taught him the fundamentals of photography by using a Leica. Intrigued by the possibilities, Kravitz began creating his own works, all of which were marked by close attention to the nuances and effects created by light. As he himself had been endlessly photographed by photographers, paparazzi, and fans--his perspective on aesthetics was decidedly unique. In Flash, he captures the essence of what it's like to be a rock star who's constantly in the public eye. The result: an intense exploration of the photographer and his subject.

Examines the stress in teaching multidisciplinary concept broad enough to include physiological, psychological, organisational and legal perspectives. The editors see stress in teaching as an interactionist concept - a complex and sometimes precarious balance between perceived work pressures, coping strategies and stress reactions. The early chapters in the book reflect this view and make contributions to understanding the causes and costs of stress in teaching. The authors of these chapters come, collectively, to the conclusion that there is an alarmingly low level of job satisfaction in teaching and that turnover intentions appear to be on the increase. This pessimistic view is challenged in later chapters by professionals working in the field of stress management. These contributions highlight the danger of focusing stress research and management. These contributions highlight the danger of focusing stress research and management

strategies on the individual rather than the organization, and report the authors' "hands on" knowledge of teacher support teams and workshop and whole-school approaches to diminishing the causes and costs of teacher stress and improving training and career development. The concluding chapters demonstrate the editors belief that useful insights for workers in the education service can be gained from studies of workplace stress in other occupations.
