Enger/Ross/Bailey: Concepts in Biology is a relatively brief introductory general biology text written for students with no previous science background. The authors strive to use the most accessible vocabulary and writing style possible while still maintaining scientific accuracy. The text covers all the main areas of study in biology from cells through ecosystems. Evolution and ecology coverage are combined in Part Four to emphasize the relationship

between these two main subject areas. The new, 14th edition is the latest and most exciting revision of a respected introductory biology text written by authors who know how to reach students through engaging writing, interesting issues and applications, and accessible level. Instructors will appreciate the book's scientific accuracy, complete coverage and extensive supplement package.

One day Raymond Francis, a chemist and a graduate of MIT, found himself in a hospital, battling for his life. The diagnosis: acute chemical hepatitis, chronic fatigue, multiple chemical sensitivities, and several autoimmune syndromes, causing him to suffer fatigue, dizziness, impaired memory, heart palpitations, diarrhea, numbness, seizures and numerous other ailments. Knowing death was imminent unless he took action, Francis decided to research solutions for his disease himself. His findings and eventual recovery led him to

conclude that almost all disease can be both prevented and reversed. In *Never Be Sick Again*, Francis presents a seminal work based on these findings – a revolutionary theory of health and disease: there is only one disease (malfunctioning cells), only two causes of disease (deficiency and toxicity), and six pathways to health and disease (nutrition, toxins, psychological, physical, genetic, and medical). This remarkable book answers the questions: What is health? What is disease? Why do people get sick? How can disease be prevented? How can it be reversed? It will teach readers, in one easy lesson, an entirely new way to look at health and disease – an approach that is easy to understand, yet so powerful that they may, indeed, never have to be sick again. Providing a basic understanding of health and disease, this book takes the mystery out of disease. It provides readers, no matter what their present physical condition, a holistic approach to living that will empower them to get well – and stay well.

Machaut's Messe de Notre Dame stands as an enduring monument of medieval musical art. As such it is one of the most widely studied and performed works of music written before 1600. The Mass itself, however, is surrounded by uncertainty; its date of composition is unknown, its purpose is unclear, and its construction yields much ambiguity. Daniel Leech-Wilkinson has now prepared a much-needed modern performing edition of this work, published by OUP's music department. This companion volume defines his editorial methods in the context of the minefield of controversies surrounding the principles of editing music of this period, and indeed of the many different interpretations of the compositional structure and function of the music. Relating the Mass to other works of the period, he provides the student and performer with an invaluable guide to its intricacies, while his approach will be welcomed by scholars as both controversial and stimulating.

The study of mental imagery has been a central concern of modern psychology, but most of what we know concerns visual imagery. A number of researchers, however, have recently begun to explore auditory imagery; this foundation-level volume presents their work. The topics covered are diverse, a reflection of the fact that auditory imagery seems relevant to numerous research domains -- from the ordinary memory rehearsal of undergraduates to the delusional voices of schizophrenics, from music imagery to imagery for speech. The chapters also address the parallels (and contrasts) between visual and auditory imagery, the relations between "inner speech" and overt speech, and between the "inner ear" and actual hearing. This book provides a valuable resource for students in many areas: imagery, working memory, music, speech, auditory perception, schizophrenia, or deafness.

Dr. Natasha Campbell-McBride set up The Cambridge Nutrition Clinic in 1998. As a parent of a child diagnosed with learning disabilities, she is acutely aware of the difficulties facing other parents like her, and she has devoted much of her time to helping these families. She realized that nutrition played a critical role in helping children and adults to overcome their disabilities, and has pioneered the use of probiotics in this field. Her willingness to share her knowledge has resulted in her contributing to many publications, as well as

presenting at numerous seminars and conferences on the subjects of learning disabilities and digestive disorders. Her book Gut and Psychology Syndrome captures her experience and knowledge, incorporating her most recent work. She believes that the link between learning disabilities, the food and drink that we take, and the condition of our digestive system is absolute, and the results of her work have supported her position on this subject. In her clinic, parents discuss all aspects of their child's condition, confident in the knowledge that they are not only talking to a professional but to a parent who has lived their experience. Her deep understanding of the challenges they face puts her advice in a class of its own.

(Chapter 3), barite-celestine deposits (Chapter 4), and the kinetics of precipitation and dissolution of gypsum, barite, and celestine (Chapter 5). Acidic environments are the theme for the next four chapters, which cover soluble metal salts from sulfide oxidation (Chapter 6), iron and aluminum hydroxysulfates (Chapter 7), jarosites in hydrometallurgy (Chapter 8), and alunite-jarosite crystallography, thermodynamics, and geochronology (Chapter 9). The next two chapters discuss thermodynamic modeling of sulfate systems from the perspectives of predicting sulfate-mineral solubilities in waters covering a wide range in composition and concentration (Chapter 10) and predicting interactions between sulfate solid solutions and aqueous solutions (Chapter 11). The concluding chapter on stable-isotope systematics (Chapter 12) discusses the utility of sulfate minerals in understanding the geological and geochemical processes in both high- and low-temperature environments, and in unraveling the past evolution of natural systems through paleoclimate studies. The review chapters in this volume were the basis for a short course on sulfate minerals sponsored by the Mineralogical Society of America (MSA) November 11-12, 2000 in Tahoe City, California, prior to the Annual Meeting of MSA, the Geological Society of America, and other associated societies in nearby Reno, Nevada. The conveners of the course (and editors of this volume of Reviews in Mineralogy and

"Law for Nurses and Midwives, 7th edition gives undergraduate and postgraduate nursing and midwifery students a concise introduction to the law as it pertains health care provision in Australia. As students will already appreciate, nursing and midwifery practice involves making decisions with and for others. This often requires evaluation of best interests and obligations and an assessment of what will best protect or enhance a patient or client's wellbeing. Understanding the application of current legal statutes - particularly those relating to negligence and consent - as they apply to professional practice is therefore essential for all nurses and midwives. Law for Nurses and Midwives, 7th edition provides students with information and knowledge necessary to make well informed and considered decisions - both for themselves and for those under their care. "Convincing Ground" pulses with love of country. In this powerful, lyrical and passionate new work Bruce Pascoe asks us to fully acknowledge our past and the way those actions continue to influence our nation today, both physically and intellectually. The book resonates with ongoing debates about identity, dispossession, memory and community. Pascoe draws on the past through a critical examination of major historical works and witness accounts and finds uncanny parallels between the techniques and language used there to today's national political stage. He has written the book for all Australians, as an antidote to the great Australian inability to deal respectfully with the nation's constructed Indigenous past. For Pascoe, the Australian character was not forged at Gallipoli, Eureka and the back of Bourke, but in the furnace of Murdering Flat, Convincing Ground and Werribee. He knows we can't reverse the past, but believes we can bring in our soul from the fog of delusion. Pascoe proposes a way forward, beyond shady intellectual argument and immature nationalism, with our strengths enhanced and our weaknesses acknowledged and addressed.
