Silas Marner

Offers classic, well-written articles that have stood the test of time and have something to teach on the subject of medical ethics.

Life's Dominion

Better than Human

Breakthroughs in genetics present us with a promise and a predicament. The promise is that we will soon be able to treat and prevent a host of debilitating diseases. The predicament is that our newfound genetic knowledge may enable us to manipulate our nature—to enhance our genetic traits and those of our children. Although most people find at least some forms of genetic engineering disquieting, it is not easy to articulate why. What is wrong with re-engineering our nature? The Case against Perfection explores these and other moral quandaries connected with the quest to perfect ourselves and our children. Michael Sandel argues that the pursuit of perfection is flawed for reasons that go beyond safety and fairness. The drive to enhance human nature through genetic technologies is objectionable because it represents a bid for mastery and dominion that fails to appreciate the gifted character of human powers and achievements. Carrying us beyond familiar terms of political discourse, this book contends that the genetic revolution will change the way philosophers discuss ethics and will force spiritual questions back onto the political agenda. In order to grapple with the ethics of enhancement, we need to confront questions largely lost from view in the modern world. Since these questions verge on theology, modern philosophers and political theorists tend to shrink from them. But our new powers of biotechnology make these questions unavoidable. Addressing them is the task of this book, by one of America's preeminent moral and political thinkers.

Choosing Children

Believing the quest to attain human perfection endangers the view of human life as a gift, argues against proposals to bioengineer human life through cloning and gene modification.

Notes on My Books

An examination of "enhancement technologies" in America considers the pervasiveness of self-improvement drugs and procedures in spite of society's general unease about their use, considering the reasons why people obsessively pursue self-happiness through conformist methods. Reprint. 13,000 first printing.

Beyond Four Borders

Breakthroughs in genetics present us with a promise and a predicament. The promise is that we will soon be able to treat and prevent a host of debilitating diseases. The predicament is that our newfound genetic knowledge may enable us to manipulate our nature—to enhance our genetic traits and those of our children. Although most people find at least some forms of genetic engineering disquieting, it is not easy to articulate why. What is wrong with re-engineering our nature? The Case against Perfection explores these and other moral quandaries connected with the quest to perfect ourselves and our children. Michael Sandel argues that the pursuit of perfection is flawed for reasons that go beyond safety and fairness. The drive to enhance human nature through genetic technologies is objectionable because it represents a bid for mastery and dominion that fails to appreciate the gifted character of human powers and achievements. Carrying us beyond familiar terms of political discourse, this book contends that the genetic revolution will change the way philosophers discuss ethics and will force spiritual

questions back onto the political agenda. In order to grapple with the ethics of enhancement, we need to confront questions largely lost from view in the modern world. Since these questions verge on theology, modern philosophers and political theorists tend to shrink from them. But our new powers of biotechnology make these questions unavoidable. Addressing them is the task of this book, by one of America's preeminent moral and political thinkers.

Ethical Issues in Modern Medicine

Human enhancement has risen into prominence as a topic in practical ethics and in public debates about the appropriate focus of biomedical research. This book features original contributions from many of the world's leading ethicists and moral thinkers working on these questions, representing a wide range of perspectives---from both the East and the West, from both booster and knockers and sceptics and moderates, with an emphasis on careful analytic work. Julian Savulescu and Nick Bostrom thus present a unique snapshot of the state of the debate. This is a must-read for anybody who wishes to have an informed opinion on these matters.

Proof of God

Progress in genetic and reproductive technology now offers us the possibility of choosing what kinds of children we do and don't have. Should we welcome this power, or should we fear its implications? There is no ethical question more urgent than this: we may be at a turning-point in the history of humanity. The renowned moral philosopher and best-selling author Jonathan Glover shows us how we might try to answer this question, and other provoking and disturbing questions to which it leads. Surely parents owe it to their children to give them the best life they can? Increasingly we are able to reduce the number of babies born with disabilities and disorders. But there is a powerful new challenge to conventional thinking about the desirability of doing so: this comes from the voices of those who have these conditions. They call into question the very definition of disability. How do we justify trying to avoid bringing people like them into being? In 2002 a deaf couple used sperm donated by a friend with hereditary deafness to have a deaf baby: they took the view that deafness is not a disability, but a difference. Starting with the issues raised by this case, Jonathan Glover examines the emotive idea of "eugenics", and the ethics of attempting to enhance people, for non-medical reasons, by means of genetic choices. Should parents be free, not only to have children free from disabilities, but to choose, for instance, the colour of their eyes or hair? This is no longer a distant prospect, but an existing power which we cannot wish away. What impact will such interventions have, both on the individuals concerned and on society as a whole? Should we try to make general improvements to the genetic make-up of human beings? Is there a central core of human nature with which we must not interfere? This beautifully clear book is written for anyone who cares about the rights and wrongs of parents' choices for their children, anyone who is concerned about our human future. Glover handles these uncomfortable questions in a controversial but always humane and sympathetic manner.

The Case against Perfection

While extending a strong challenge to the superstition of atheism, the principal aim of this book is to demonstrate the fact that the major scientific discoveries that have been made so far, distinctively and expressly reveal the existence of an intelligent and omnipotent Designer who has thoughtfully and intentionally instituted all universal laws with stark precision and accuracy. In this discussion I have also emphasized the incapability of science to stand alone as a final deciding instrument on matters that extend beyond the natural realm. Hence no proof of a Divine Existence can be established by reference to science alone, but through logical reasoning based on obvious and explicit facts. I have also highlighted the reality that most scientific phenomena cannot be explained without recourse to the role of a Supernatural Power. In this book I have put forward a chain of very rational arguments most of which originated in my mind at various occasions and hence would be new and interesting to the reader who would be led towards the definite conclusion that this universe could not have been the outcome of an accident or random chance, but the result of an intentional plan of a Supernatural Power. A unique feature of this book is that all the arguments presented by me here are determined upon logical conclusions based on common sense and scientifically established facts and not on sheer imaginary hypothesis. On my contemplative reasoning I am also presenting a proposition which I have named as the Theory of Irresistible Cessation of Matter and Irreversible Nature of Life as proof of the existence of a precise Divine plan. Charles de Silva

The Nicomachean Ethics of Aristotle

Is it right to use biomedical technologies to make us better than well or even perhaps better than human? Should we view our biology as fixed or should we try to improve on it? College students are already taking cognitive enhancement drugs. The U.S. army is already working to develop drugs and technologies to produce "super soldiers." Scientists already know how to use genetic engineering techniques to enhance the strength and memories of mice and the application of such technologies to humans is on the horizon. In *Better Than Human*, philosopher-bioethicist Allen Buchanan grapples with the ethical dilemmas of the biomedical enhancement revolution. Biomedical enhancements can make us smarter, have better memories, be stronger, quicker, have more stamina, live much longer, avoid the frailties of aging, and enjoy richer emotional lives. In spite of the benefits that biomedical enhancements may bring, many people instinctively reject them. Some worry that we will lose something important—our appreciation for what we have or what makes human beings distinctively valuable. Others assume that biomedical enhancements will only be available to the rich, with the result that social inequalities will worsen. Buchanan shows that the debate over enhancement has been distorted by false assumptions and misleading rhetoric. To think clearly about enhancement, we have to acknowledge that human nature is a mixed bag and that our species has many "design flaws." We should be open to the possibility of becoming better than human, while never underestimating the risks that our attempts to improve may backfire.

On the Go Coloring Book

Ancient souls reawaken to destiny when Ilfin and Glonu spaceships hurtle through the spaces. As a fireball grows ever larger in the skies, oblivious masters seek more slaves. Massin is the gathering place for every omen of disaster. In the marshes below the plateau, Lyra and Damin plan to save their civilisation and their families, but it will require more than words to awaken people from complacency. Special talents

are needed to incite action, talents inherent in the ancient bloodlines of another world. Magical abilities - the Ilfin Talents. All must march across the vast plains from the eastern highlands and the western seas to reach the mighty mountains in the south. There they may escape the fires; there they will hide from the masters; there is the isolation to begin a new civilisation, free from the past, free from oppression. A host will march to Arc, the paradise beyond the southern mountains, an ancient sanctuary, one that survived every impact from the heavens and every battle between the Ilfin and the Glonu of previous times. An Elemental will find the sanctuary, a Warrior will protect the dispossessed and a Marsh Devil will lead them. Will Arc protect them?

The Singularity

Should we pay children to read books or to get good grades? Should we allow corporations to pay for the right to pollute the atmosphere? Is it ethical to pay people to test risky new drugs or to donate their organs? What about hiring mercenaries to fight our wars? Auctioning admission to elite universities? Selling citizenship to immigrants willing to pay? In *What Money Can't Buy*, Michael J. Sandel takes on one of the biggest ethical questions of our time: Is there something wrong with a world in which everything is for sale? If so, how can we prevent market values from reaching into spheres of life where they don't belong? What are the moral limits of markets? In recent decades, market values have crowded out nonmarket norms in almost every aspect of life—medicine, education, government, law, art, sports, even family life and personal relations. Without quite realizing it, Sandel argues, we have drifted from having a market economy to being a market society. Is this where we want to be? In his New York Times bestseller *Justice*, Sandel showed himself to be a master at illuminating, with clarity and verve, the hard moral questions we confront in our everyday lives. Now, in *What Money Can't Buy*, he provokes an essential discussion that we, in our market-driven age, need to have: What is the proper role of markets in a democratic society—and how can we protect the moral and civic goods that markets don't honor and that money can't buy?

Melting Point 2040

This book *Beyond Four Borders* is about marriage challenges of the South African citizens who are married to Africans from Africa. The damage of the division of Africa a long time ago still is felt today. The different languages, cultures, perceptions, and stereotypes. Some South African mothers even go to the extent of cursing their daughters married to Africans from Africa. Some African mothers from Africa also don't approve South African ladies. We need to address this in order to allow our children to marry those they love. In this book I'm focusing on those who are struggling in marriages. These are usually the middle class and the lower class people. The rich don't experience these challenges. God gave me the title *Beyond Four Borders* based on that my husband Katalay was beyond four borders when I wrote this book. Katalay comes from Democratic Republic of Congo, when traveling by road, he goes through Zambia (2 borders), Zimbabwe (2 borders) then enter South African border. L'amour and I suffered hardship when Katalay was in Congo for over four years. The lies, gossiping, humiliation at home, in the community and some churches. The false beliefs that "foreign nationals marry South African women for identity document and to get resources. That African men from Africa come to South Africa already married and marry South African women

as second wives. Denying African men from visiting their parents and siblings accusing them of visiting their wives and children. Now also added is falsely accusing foreign nationals of being human traffickers without any proof." Children of South Africans and African parents hide their identities at school for fear of discrimination. My daughter L'amour is asked by her classmates what nationality she is. They don't understand why her name is L'amour and not an African name. Some women and children why L'amour is taller than her classmates. There are children from various African countries who hide their identities because the moment it is known they are called derogative names. One day I took L'amour at a public park, I heard some kids between 7 - 10 years old telling a young Zimbabwean boy to go to his country and stop using a South African swing. The boy just kept quiet and kept playing. I did watch to make sure the boy was not beaten by his bullies. As individuals we have to make sure we promote loving our fellow human beings in spite of where they come from. There are people who think I'm from Africa and not a South African. That does not bother me. This happened even before the democracy of South Africa. I remember applying for an identity document, I spent two years going to Home Affairs Department, every Mondays, Wednesdays and Fridays after school to apply for my identify document. Home Affairs told me to go to Zimbabwe or Mozambique to bring my father. What a humiliation it was. This book is also based on my personal challenges being married to a Congolese and of others I have met with similar problems. My domineering and controlling mother and relatives rejecting my husband. My husband's domineering and controlling mother who rejected me. Katalay's mother and sister calling me a foreigner, on the other hand my mother, siblings and some relatives calling Katalay a foreigner. These inflictions of pain went on for over 10 years of our marriage. When they failed on talking they resorted to witchcraft. It is unfair that parents choose for their children who to marry. To claim to care and protect their children. The phenomenon of choosing marriage partners by parents for their children is an unfair practice. Such parents usually have their interest in heart and not that of their children. Some of these children after agreeing to the arranged marriage they turn to drugs and alcohol to deal with the pressure. Some even abuse their spouses.

Montezuma's Daughter

Internationally renowned lawyer and philosopher Ronald Dworkin addresses the crucially related acts of abortion and euthanasia in a brilliantly original book that examines their meaning in a nation that prizes both life and individual liberty. From *Roe v. Wade* to the legal battle over the death of Nancy Cruzan, no issues have opened greater rifts in American society than those of abortion and euthanasia. At the heart of *Life's Dominion* is Dworkin's inquest into why abortion and euthanasia provoke such controversy. Do these acts violate some fundamental "right to life"? Or are the objections against them based on the belief that human life is sacred? Combining incisive moral reasoning and close readings of individual court decisions with a majestic interpretation of the U.S. Constitution itself, Dworkin gives us a work that is absolutely essential for anyone who cares about the legal status of human life.

Elijah & the Grand Prize Halloween Pumpkin

Most people think that the difficulty of balancing career and personal/family relationships is the fault of present-day society or is due to their own inadequacies. But in this major new book, eminent moral philosopher Michael Slote argues that the difficulty runs much deeper, that it is

due to the essential nature of the divergent goods involved in this kind of choice. He shows more generally that perfect human happiness and perfect virtue are impossible in principle, a view originally enunciated by Isaiah Berlin, but much more thoroughly and synoptically defended here than ever before. Ancient Greek and modern-day Enlightenment thought typically assumed that perfection was possible, and this is also true of Romanticism and of most recent ethical theory. But if, as Slote maintains, imperfection is inevitable, then our inherited categories of virtue and personal good are far too limited and unqualified to allow us to understand and cope with the richer and more complex life that characterizes today's world. And *The Impossibility of Perfection* argues in particular that we need some new notions, new distinctions, and even new philosophical methods in order to distill some of the ethical insights of recent feminist thought and arrive at a fuller and more realistic picture of ethical phenomena.

When Does It Get Easier?

Elijah is a clever little ghost in this adorable, not scary, Halloween book for young children. Elijah's story includes plenty of Halloween characters: friendly vampires, helpful jack-o-lanterns, silly mummies, batty black cats, cute bats and witty witches! Told with colorful illustrations and lighthearted rhymes, children have fun developing essential pre-reading skills necessary for success in school. It makes a great gift for any child, but especially for an "Elijah" because he is the star of this book, and his name is featured throughout. Note that this book is available with many other popular names!

Encountering China

The Future of Human Nature

The story of the humble and mysterious figure of the linen weaver Silas Marner, on his journey from solitude and exile to the warmth and joy of family life.

Address Book.

Reproduction of the original: Notes on My Books by Joseph Conrad

The Theory of Moral Sentiments

Recent developments in biotechnology and genetic research are raising complex ethical questions concerning the legitimate scope and limits of genetic intervention. As we begin to contemplate the possibility of intervening in the human genome to prevent diseases, we cannot help

but feel that the human species might soon be able to take its biological evolution in its own hands. "Playing God" is the metaphor commonly used for this self-transformation of the species, which, it seems, might soon be within our grasp. In this important new book, Jürgen Habermas — the most influential philosopher and social thinker in Germany today — takes up the question of genetic engineering and its ethical implications and subjects it to careful philosophical scrutiny. His analysis is guided by the view that genetic manipulation is bound up with the identity and self-understanding of the species. We cannot rule out the possibility that knowledge of one's own hereditary factors may prove to be restrictive for the choice of an individual's way of life and may undermine the symmetrical relations between free and equal human beings. In the concluding chapter — which was delivered as a lecture on receiving the Peace Prize of the German Book Trade for 2001 — Habermas broadens the discussion to examine the tension between science and religion in the modern world, a tension which exploded, with such tragic violence, on September 11th.

The Case Against Perfection

What Money Can't Buy

At once a compelling personal narrative and an evocative portrait of contemporary China, this also serves as an invaluable guide for readers as they navigate the process of adopting from China.

Address Book

If you find yourself in severe personal trials, wondering where God is, this book is for you. Do you have a pile of insurmountable problems, a tragedy about to happen, or maybe a pattern in your life that goes on and on, never seeming to change or improve? It's another trip around the mountain, and the mountain is getting steeper and rockier every time. Huge obstacles keep blocking your way; death lurks around the next bend; a black cloud follows you wherever you go. What are we willing to endure in order to be changed by God? While the disciples expected to see greater victory, comfort, and excitement from their Master, Jesus talked more and more about dying, giving all, and taking up your cross. While they wanted to celebrate and make Him king, He told them He was going to suffer and die, and they were too. Why? Because suffering is the scriptural price of drawing closer to Him.

Us Until Now

Is a baby whose personality has been chosen from a gene supermarket still a human? If we choose what we create what happens to morality? Is this the end of human nature? The dramatic advances in DNA technology over the last few years are the stuff of science fiction. It is now not only possible to clone human beings it is happening. For the first time since the creation of the earth four billion years ago, or the

emergence of mankind 10 million years ago, people will be able to choose their children's' sex, height, colour, personality traits and intelligence. It will even be possible to create 'superhumans' by mixing human genes with those of other animals for extra strength or longevity. But is this desirable? What are the moral and political consequences? Will it mean anything to talk about 'human nature' any more? Is this the end of human beings? Our Posthuman Future is a passionate analysis of the greatest political and moral problem ever to face the human race.

Public Philosophy

Immanuel Kant's Groundwork for the Metaphysics of Morals is one of the most important texts in the history of ethics. In it Kant searches for the supreme principle of morality and argues for a conception of the moral life that has made this work a continuing source of controversy and an object of reinterpretation for over two centuries. This new edition of Kant's work provides a fresh translation that is uniquely faithful to the German original and more fully annotated than any previous translation. There are also four essays by well-known scholars that discuss Kant's views and the philosophical issues raised by the Groundwork. J.B. Schneewind defends the continuing interest in Kantian ethics by examining its historical relation both to the ethical thought that preceded it and to its influence on the ethical theories that came after it; Marcia Baron sheds light on Kant's famous views about moral motivation; and Shelly Kagan and Allen W. Wood advocate contrasting interpretations of Kantian ethics and its practical implications.

Human Enhancement

us until now in some relationships there is a second and real beginning marriage in marriage, there are several stages of growth which can lead to enhanced love or final goodbyes.

The Lost Daughters of China

In the year 2040, America faces divide. Terrorist assaults, racial conflicts and political opportunists threaten its very survival. A riveting, thought-provoking tale, Melting Point 2040 explores the human costs of an America growing apart - following intertwined lives of a young Mexican immigrant, a disconnected survival gaming fanatic, a University professor and others competing to resolve disputes on their terms. It's a different world. America's economic supremacy has been surpassed. Computer programs drive cars that shape around passengers. English is no longer the primary language in several of 52 states. With a second Great Depression embedded in the nation's mindset and many issues unresolved for generations, America's most divisive challenge since the Civil War is coming to full boil. America's future may depend on a reluctant hero.

Groundwork for the Metaphysics of Morals

What is wrong with re-engineering genetics? In this work, Sandel argues that the pursuit of perfection is flawed for reasons that go beyond safety and fairness. He contends that the genetic revolution will change the way philosophers discuss ethics and will force spiritual questions back onto the political agenda.

Enhancing Evolution

Five essays: Political Ideals; Capitalism and the Wage System; Pitfalls in Socialism; Individual Liberty and Public Control; National Independence and Internationalism.

Classic Works in Medical Ethics: Core Philosophical Readings

Deeply Private, Incredibly Public: Readings on the Sociology of Human Reproduction educates readers about cultural attitudes toward reproduction and pregnancy, changes taking place in reproductive medicine and technology, the meaning of reproductive power, and what the impact of reproduction and family might mean for them someday. The book is organized into three sections. The first addresses reproduction from both medical and cultural perspectives. The readings cover a range of topics, including the medicalization of birth, family planning, and fertility rates and birth statistics around the world. The second section explores autonomy, patriarchy, and reproductive control. Students read about the impact of social structures on reproduction, factors involved in abortion, the role of men in reproductive freedom, and what reproduction means in societies where women struggle to receive equal treatment. Section three considers what is actually being created and how this creation occurs. Diverse methods of reproduction and parenting including adoption, surrogacy, genetic engineering, and the harvesting of embryos introduce students to issues that redefine conception, birth, and parenthood. Sensitive and insightful, Deeply Private, Incredibly Public is a valuable resource for courses in sociology. Catherine Marrone received both her B.A. and Ph.D. in sociology from Stony Brook University in New York and completed two years of post-doctoral work at the Yale School of Medicine Department of Epidemiology and Public Health. Dr. Marrone is a senior lecturer of sociology at Stony Brook University, where she teaches courses in sociology to undergraduate students and is the director of undergraduate studies. She also serves as a faculty advisor in the multidisciplinary studies major. Her areas of interest include medical sociology, gender, and the sociology of human reproduction.

Our Posthuman Future

This comprehensive anthology represents the key issues and problems in the field of medical ethics through the most up-to-date readings and case studies available. Each of the book's six parts is prefaced with helpful introductions that raise important questions and skillfully contextualize the positions and main points of the articles that follow.

Ilfin of Arc

Download Ebook The Case Against Perfection Ethics In The Age Of Genetic Engineering

In this book, Michael Sandel takes up some of the hotly contested moral and political issues of our time, including affirmative action, assisted suicide, abortion, gay rights, stem cell research, the meaning of toleration and civility, the gap between rich and poor, the role of markets, and the place of religion in public life. He argues that the most prominent ideals in our political life--individual rights and freedom of choice--do not by themselves provide an adequate ethic for a democratic society. Sandel calls for a politics that gives greater emphasis to citizenship, community, and civic virtue, and that grapples more directly with questions of the good life. Liberals often worry that inviting moral and religious argument into the public sphere runs the risk of intolerance and coercion. These essays respond to that concern by showing that substantive moral discourse is not at odds with progressive public purposes, and that a pluralist society need not shrink from engaging the moral and religious convictions that its citizens bring to public life.

The Case Against Perfection

Address Book Size 6" x 9" Over 300 Sections To Record Contact Details. Glossy And Soft Cover, Large Print, Font, 6" x 9" For Contacts, Addresses, Phone Numbers, Emails, Birthday And More.

The Impossibility of Perfection

This volume represents the combination of two special issues of the Journal of Consciousness Studies on the topic of the technological singularity. Could artificial intelligence really out-think us, and what would be the likely repercussions if it could? Leading authors contribute to the debate, which takes the form of a target chapter by philosopher David Chalmers, plus commentaries from the likes of Daniel Dennett, Nick Bostrom, Ray Kurzweil, Ben Goertzel, Frank Tipler, among many others. Chalmers then responds to the commentators to round off the discussion.

Liberalism and the Limits of Justice

In Michael Sandel the Chinese have found a guide through the ethical dilemmas created by their swift embrace of a market economy—one whose communitarian ideas resonate with China's own rich, ancient philosophical traditions. This volume explores the connections and tensions revealed in this unlikely episode of Chinese engagement with the West.

Political Ideals

In *Enhancing Evolution*, leading bioethicist John Harris dismantles objections to genetic engineering, stem-cell research, designer babies, and cloning and makes an ethical case for biotechnology that is both forthright and rigorous. Human enhancement, Harris argues, is a good thing--good morally, good for individuals, good as social policy, and good for a genetic heritage that needs serious improvement. *Enhancing*

Evolution defends biotechnological interventions that could allow us to live longer, healthier, and even happier lives by, for example, providing us with immunity from cancer and HIV/AIDS. Further, Harris champions the possibility of influencing the very course of evolution to give us increased mental and physical powers--from reasoning, concentration, and memory to strength, stamina, and reaction speed. Indeed, he says, it's not only morally defensible to enhance ourselves; in some cases, it's morally obligatory. In a new preface, Harris offers a glimpse at the new science and technology to come, equipping readers with the knowledge to assess the ethics and policy dimensions of future forms of human enhancement.

The Case against Perfection

Featuring 25 geometric intricate line drawings of diverse patterns, this collection is for everyone who loves to color. These designs provide endless opportunity for experimentation with color and technique. The imaginative patterns and borders give each design a polished appearance. Specially designed for experienced colorists, coloring books offer an escape to a world of inspiration and artistic fulfillment. You will get hours of enjoyment and stress relief as you enhance the designs with colored pencils, markers, and other art media. Considered beneficial to all ages, coloring has been proven to generate wellness and quietness, as well as to stimulate the brain areas related to the senses and creativity. We present this book as one of several coloring books. These artistic drawings offer complexity to engage the brain, but also simplicity, in that there are no rules or even guidelines.
