The Miracle Nutrient

Your body has trillions of cells, and each one has the complexity and dynamism of a city. Your life, your thoughts, your diseases, and your health are all the function of cells. But what do you really know about what goes on inside you? The last time most people thought about cells in any detail was probably in high school or a college general biology class. But the field of cell biology has advanced incredibly rapidly in recent decades, and a great deal of what we may have learned in high school and college is no longer accurate or particularly relevant. The Cell: Inside the Microscopic World that Determines Our

Health, Our Consciousness, and Our Future is a fascinating story of the incredible complexity and dynamism inside the cell and of the fantastic advancements in our understanding of this microscopic world. Dr. Joshua Z. Rappoport is at the forefront of this field, and he will take you on a journey to discover: A deeper understanding of how cells work and the basic nature of life on earth. Fascinating histories of some of the key discoveries from the seventeenth century to the last decade and provocative thoughts on the current state of academic research. The knowledge required to better understand the new developments that are announced almost weekly in science and health care, such as cancer, cellular therapies, and the potential promise of stem cells. The ability to make better decisions about health and to debunk the misinformation that comes in daily via media. Using the latest scientific research, *The Cell* illustrates the diversity of cell biology and what it all means for your everyday life.

The Vaccine Book

A “winning debut . . . Roe’s story feels just right for our desperate and despairing time, when a miracle—any miracle—will do” (Kirkus Reviews, starred review). The crowds keep coming. They arrive, all with their own reasons, with doubt or certainty or something in between. More and more arrive every day, drawn by rumor and whisper and desperate wish. They come to Shaker Street to see eight-year-old Anabelle Vincent, who lies in a coma-like state—unable to move or speak. They come because a visitor experienced what seemed like a miracle, and believed it happened because of Anabelle. Word spreads. There are more visitors, more supposed miracles, more stories on TV and the internet. But is this the divine at work or something else? A finalist for the Los Angeles Times Art Seidenbaum Award for First Fiction, “The Miracle Girl is more than an exploration of the mysteries of faith. It’s also the

unforgettable story of one family's struggle against tragedy. The result is an uplifting miracle of a book" (Will Allison, author of Long Drive Home). "[An] assured debut . . . Overfamiliarity has diluted the significance of the word 'miracle'—used to describe diets, cures, even sandwich spread—but Roe suggests that the miraculous is a perpetual human craving. The Miracle Girl is a hopeful meditation on the mysteries of faith." —The New York Times Book Review

The Miracle of MSM

"Miracles from Heaven is a powerful, healing story about family, love, faith, and hope. It amazed me and it will inspire readers everywhere.---T.D. Jakes, bestselling author of Destiny In a remarkable true story of faith and blessings, a mother tells of her sickly young daughter, how she survived a dangerous accident, her visit to Heaven and the inexplicable disappearance of the symptoms of her chronic disease. Annabel Beam spent most of her childhood in and out of hospitals with a rare and incurable digestive disorder that prevented her from ever living a normal, healthy life. One sunny day when she was able to go outside and play with her sisters, she fell three stories headfirst inside an old, hollowed-out tree, a fall that may well have caused death or paralysis. Implausibly, she survived without a scratch. While unconscious inside the tree, with rescue workers struggling to get to her, she visited heaven. After being released from the hospital, she defied science and was inexplicably cured of her chronic ailment. Miracles from Heaven will change how we look at the world around us and reinforce our belief in God and the afterlife.

Moral Laboratories is an engaging ethnography and a groundbreaking foray into the anthropology of morality. It takes us on a journey into the lives of African American families caring for children with serious chronic medical conditions, and it foregrounds the uncertainty that affects their struggles for a good life. Challenging depictions of moral transformation as possible only in moments of breakdown or in radical breaches from the ordinary, it offers a compelling portrait of the transformative powers embedded in day-to-day existence. From soccer fields to dinner tables, the everyday emerges as a moral laboratory for reshaping moral life. Cheryl Mattingly offers vivid and heart-wrenching stories to elaborate a first-person ethical framework, forcefully showing the limits of third-person renderings of morality.

The Miracle of Regenerative Medicine

A scientist assesses the potential of stem cell therapies for treating such brain disorders as stroke, Alzheimer's disease, and Parkinson's disease. Stem cell therapies are the subject of enormous hype,

endowed by the media with almost magical qualities and imagined by the public to bring about miracle cures. Stem cells have the potential to generate new cells of different types, and have been shown to do so in certain cases. Could stem cell transplants repair the damaged brain? In this book, neurobiologist Jack Price assesses the potential of stem cell therapies to treat such brain disorders as stroke, Alzheimer's disease, Parkinson's disease, and spinal cord injuries. Certainly brain disorders are in need of effective treatments. These disorders don't just kill, they disable, and conventional drug therapies have not had much success in treating them. Price explains that repairing the human brain is difficult, largely because of its structural, functional, and developmental complexity. He examines the self-repairing capacity of blood and gut cells—and the lack of such capacity in the brain; describes the limitations of early brain stem cell therapies for neurodegenerative disorders; and discusses current clinical trials that may lead to the first licensed stem cell therapies for stroke, Parkinson's and macular degeneration. And he describes the real promise of pluripotential stem cells, which can make all the cell types that constitute the body. New technologies, Price reports, challenge the very notion of cell transplantation, instead seeking to convince the brain itself to manufacture the new cells it needs. Could this be the true future of brain repair?

Now an HBO® Film starring Oprah Winfrey and Rose Byrne #1 NEW YORK TIMES BESTSELLER Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor black tobacco farmer whose cells—taken without her knowledge in 1951—became one of the most important tools in medicine, vital for developing the polio vaccine, cloning, gene mapping, and more. Henrietta's cells have been bought and sold by the billions, yet she remains virtually unknown, and her family can't afford health insurance. This phenomenal New York Times bestseller tells a riveting story of the collision between ethics, race, and medicine; of scientific discovery and faith healing; and of a daughter consumed with questions about the mother she never knew.

With the fascinating scholarship of *The Emperor of All Maladies* and the deeply personal experience of *When Breath Becomes Air*, a world-class oncologist examines the current state of cancer and its devastating impact on the individuals it affects -- including herself. In *The First Cell*, Azra Raza offers a searing account of how both medicine and our society (mis)treats cancer, how we can do better, and why we must. A lyrical journey from hope to despair and back again, *The First Cell* explores cancer from every angle: medical, scientific, cultural, and personal. Indeed, Raza describes how she bore the terrible burden of being her own husband's oncologist as he succumbed to leukemia. Like *When Breath Becomes Air*, *The First Cell* is no ordinary book of medicine, but a book of wisdom and grace by an author who has devoted her life to making the unbearable easier to bear.

full of laughter and adventure with her family, and the next, she was staring into a future that was as empty as her heart. Now her life is a waiting game. Waiting for time to heal her wounds, waiting for justice. In short, waiting for a miracle to happen. For Shay Bourne, life holds no more surprises. The world has given him nothing, and he has nothing to offer the world. In a heartbeat, though, something happens that changes everything for him. Now, he has one last chance for salvation, and it lies with June's eleven-year-old daughter, Claire. But between Shay and Claire stretches an ocean of bitter regrets, past crimes, and the rage of a mother who has lost her child. Would you give up your vengeance against someone you hate if it meant saving someone you love? Would you want your dreams to come true if it meant granting your enemy's dying wish? Once again, Jodi Picoult mesmerizes and enthralls readers with this story of redemption, justice, and love.

ARE WE ALONE IN THE UNIVERSE? In his latest far-reaching book, *The Fifth Miracle*, internationally acclaimed physicist and writer Paul Davies confronts one of science's great outstanding mysteries -- the origin of life. Three and a half billion years ago, Mars resembled Earth. It was warm and wet and could have supported primitive organisms. If life once existed on Mars, might it have originated there and traveled to Earth inside meteorites blasted into space by cosmic impacts? Davies builds on the

latest scientific discoveries and theories to address the larger question: What, exactly, is life? Is it the inevitable by-product of physical laws, as many scientists maintain, or an almost miraculous accident? Are we alone in the universe, or will life emerge on all Earth-like planets? And if there is life elsewhere in the universe, is it preordained to evolve toward greater complexity and intelligence? On the answers to these deep questions hinges the ultimate purpose of mankind -- who we are and what our place might be in the unfolding drama of the cosmos.

The Immortal Life of Henrietta Lacks

One of the world's leading experts on genetics unravels one of the most important breakthroughs in modern science and medicine. If our genes are, to a great extent, our destiny, then what would happen if mankind could engineer and alter the very essence of our DNA coding? Millions might be spared the devastating effects of hereditary disease or the challenges of disability, whether it was the pain of sickle-cell anemia to the ravages of Huntington's disease. But this power to "play God" also raises major ethical questions and poses threats for potential misuse. For decades, these questions have lived exclusively in the realm of science fiction, but as Kevin Davies powerfully reveals in his new book, this

is all about to change. Engrossing and page-turning, *Editing Humanity* takes readers inside the fascinating world of a new gene editing technology called CRISPR, a high-powered genetic toolkit that enables scientists to not only engineer but to edit the DNA of any organism down to the individual building blocks of the genetic code. Davies introduces readers to arguably the most profound scientific breakthrough of our time. He tracks the scientists on the front lines of its research to the patients whose powerful stories bring the narrative movingly to human scale. Though the birth of the “CRISPR babies” in China made international news, there is much more to the story of CRISPR than headlines seemingly ripped from science fiction. In *Editing Humanity*, Davies sheds light on the implications that this new technology can have on our everyday lives and in the lives of generations to come.

The scientist who has been dubbed the “Father of Intelligent Design” and author of the groundbreaking book *Darwin’s Black Box* contends that recent scientific discoveries further disprove Darwinism and strengthen the case for an intelligent creator. In his controversial bestseller *Darwin’s Black Box*, biochemist Michael Behe challenged Darwin’s theory of evolution, arguing that science itself has proven that intelligent design is a better explanation for the origin of life. In *Darwin Devolves*, Behe advances his argument, presenting new research that offers a startling reconsideration of how Darwin’s mechanism works, weakening the theory’s validity even more. A system of natural selection acting on random mutation, evolution can help make something look and act differently. But evolution never creates something organically. Behe contends that Darwinism actually works by a process of devolution—damaging cells in DNA in order to create something new at the lowest biological levels. This is important, he makes clear, because it shows the Darwinian process cannot explain the creation of life itself. “A process that so easily tears down sophisticated machinery is not one which will build complex, functional systems,” he writes. In addition to disputing the methodology of Darwinism and how it conflicts with the concept of creation, Behe reveals that what makes Intelligent Design unique—and right—is that it acknowledges causation. Evolution proposes that organisms living today are descended with modification from organisms that lived in the distant past. But Intelligent Design goes a step further asking, what caused such astounding changes to take place? What is the reason or mechanism for evolution? For Behe, this is what makes Intelligent Design so important.

Change of Heart

We associate light with the radiant beams that make the world visible to us. But the visible spectrum is only a tiny percentage of an electromagnetic spectrum that extends unimaginably far in both directions. And, as biologist Michael Denton carefully documents, that tiny band of visual light is crucial to life on Earth. In *Children of Light*, Denton elucidates the miraculous convergence of properties on the tiny band we call the visible spectrum that has allowed intelligent life to flourish on Earth. Follow the journey of light as it beams down from our Sun, through the protective blanket of our atmosphere, to the Earth. Once here, it powers photosynthesis and unlocks the oxygen needed for life. It allows the high-acuity vision that led us to civilization and technology. Light is just one more part of the epic story of our fine-tuned universe, fit for us to flourish here and come to understand it. This book is the third book in the *Privileged Species* series, which also includes *The Wonder of Water* and *Fire-Maker*.

Turn on the body's self-healing abilities, prevent illness before it starts, and reverse the aging process • Explains how to activate the body's regenerative abilities and combat inflammation through diet, supplements, detox, herbs, exercise, energy medicine, and mindfulness • Examines the science of epigenetics and the potential of stem cell therapies for regeneration of joints and organs as well as for healing the telomeres of our DNA • Reveals the importance of hormone balance and sleep as a core regenerative therapy Harnessing the advances of the new paradigm of medicine--which focuses on the regenerative abilities of the body rather than symptom management--Elisa Lottor, Ph.D., HMD, explains how each of us can turn on the body's self-healing abilities, prevent illness before it starts, and reverse the aging process to live longer, healthier, and happier lives. Beginning with a focus on the foods we eat, the author reveals how many diseases and symptoms of aging are the result of inflammation in the body, caused by poor diet and a lack of crucial nutrients. She explains the top foods to avoid, such as refined sugar, and the best nutrient-rich foods to include, along with easy and delicious recipes. Showing how regenerative medicine treats the roots of aging and disease, preventing them before they start, she details the regenerative properties of the liver complex, explaining the best ways to detox, and reveals how to restore optimal microbe balance in your gut. Dr. Lottor explores the regenerative properties of adaptogens, herbs, and nutraceuticals, the unobtrusive healing practices of energy medicine, the importance of hormone balance, and the concept of living water. She also underscores sleep as a core regenerative therapy. Looking at the most cutting-edge research in the rapidly emerging field of

regenerative medicine, Dr. Lottor examines the potential of stem cell therapies for regeneration of joints and organs as well as for lengthening our DNA's telomeres, the shrinkage of which is now considered a chief cause of aging. She also looks at the science of gene expression--epigenetics--and how DNA can be used as both a health predictor and a tool for preventing inherited diseases. Including a comprehensive resource section for finding products and practitioners, Dr. Lottor offers each of us the necessary tools and information to reverse aging and participate in your own wellness.
