"When Mind Over Medicine was first published, it broke new ground in the fertile region where science and spirituality intersect. Through the process of restoring her own health, Dr. Lissa Rankin discovered that the conventional health care she had been taught to practice was missing something crucial: a recognition of the body's innate ability to self-repair and an appreciation for how we can control these self-healing mechanisms with the power of the mind. To better understand this phenomenon, she explored peer-reviewed medical literature and found evidence that the medical establishment had been

proving that the body can heal itself for over 50 years. She shared her findings and laid out a practical plan for readers to heal themselves in a profoundly wise book that became a New York Times bestseller and is now a classic guide for people on a healing journey from illness, injury, or trauma. In the years since then, Dr. Rankin has deepened her exploration of the world's healing traditions and her understanding of the healing power we hold within ourselves. This revised edition of *Mind Over Medicine* reflects her latest research, evolving wisdom, and work with clients and students in her healing community, as well as with doctors and other healers in her Whole Health Medicine Institute"--

Note to Readers: This is an unofficial summary & analysis of Wim Hof's "Wim Hof Method" designed to enrich your reading experience. THE WIM HOF METHOD BY WIM HOF will describe a method that combines breathing exercises, cold training, and commitment. The method is named after Wim Hof, the extreme athlete who brought these three components together. It is also named after Hof for practical reasons: he is already well-known for his many appearances on television showing how his body is able to deal with extreme temperatures. The method is based on Wim Hof's many years of training in the natural environment. For a long time, he has tested his body's limits by exposing himself to increasingly extreme challenges. An important discovery made during this process was his ability to control his bodily functions in a way that science had not deemed possible. For example, anyone can lift their right hand and scratch their nose with their index finger, but no one can fight bacteria that have been injected

into their arm. Hof can do that. He can influence and control his autonomic nervous system. The autonomic nervous system regulates human functions such as body temperature, heart rate, blood pressure and breathing, and determines whether blood vessels should dilate or contract. In other words, the biological functions that happen in your body automatically.

### **Breathing for Warriors**

What Doesn't Kill Us, a New York Times bestseller, traces our evolutionary journey back to a time when survival depended on how well we adapted to the environment around us. Our ancestors crossed deserts, mountains, and oceans without even a whisper of what anyone today might consider modern technology. Those feats of endurance now seem impossible in an age where we take comfort for granted. But what if we could regain some of our lost evolutionary strength by simulating the environmental conditions of our ancestors? Investigative journalist and anthropologist Scott Carney takes up the challenge to find out: Can we hack our bodies and use the environment to stimulate our inner biology? Helping him in his search for the answers is Dutch fitness guru Wim Hof, whose ability to control his body temperature in extreme cold has sparked a whirlwind of scientific study. Carney also enlists input from an Army scientist, a world-famous surfer, the founders of an obstacle course race movement, and ordinary people who have documented how they have cured autoimmune diseases, lost weight, and reversed diabetes. In the process, he chronicles his own transformational journey as he pushes his body and mind to the edge of endurance, a quest that culminates in a record-bending, 28-hour climb to the snowy peak of Mt. Kilimanjaro wearing nothing but a pair of running shorts and sneakers. An ambitious blend of investigative reporting and participatory journalism, What Doesn't Kill Us explores the true

connection between the mind and the body and reveals the science that allows us to push past our perceived limitations.

### **Practice You**

AN INSTANT NEW YORK TIMES BESTSELLER No matter what you eat, how much you exercise, how skinny or young or wise you are, none of it matters if you're not breathing properly. There is nothing more essential to our health and well-being than breathing: take air in, let it out, repeat twenty-five thousand times a day. Yet, as a species, humans have lost the ability to breathe correctly, with grave consequences. Journalist James Nestor travels the world to figure out what went wrong and how to fix it. The answers aren't found in pulmonology labs, as we might expect, but in the muddy digs of ancient

burial sites, secret Soviet facilities, New Jersey choir schools, and the smoggy streets of São Paulo. Nestor tracks down men and women exploring the hidden science behind ancient breathing practices like Pranayama, Sudarshan Kriya, and Tummo and teams up with pulmonary tinkerers to scientifically test long-held beliefs about how we breathe. Modern research is showing us that making even slight adjustments to the way we inhale and exhale can jump-start athletic performance; rejuvenate internal organs; halt snoring, asthma, and autoimmune disease; and even straighten scoliotic spines. None of this should be possible, and yet it is. Drawing on thousands of years of medical texts and recent cutting-edge studies in pulmonology, psychology, biochemistry, and human physiology, *Breath* turns the conventional wisdom of what we thought we knew about our most basic biological function on its head. You will never breathe the same again.

This book will teach parents to train their children to manage their freedoms and protect their important heart to heart relationships.

Tantra is an ancient science dealing with many different systems for increasing the speed of human evolution. It predates all of the world's existing religions, and provides the esoteric basis on which many of these religions were later based. Tantra provides practical techniques applicable by men and women of every temperament and spiritual level, and aims at turning every action of life into an act of sadhana, or spiritual practice. The practices included in this book are based in tantra, though many of them have been forgotten for thousands of years. The task of rediscovering them and putting them in a form which can be understood and practised by people of this age has been done solely by Swami Satyananda Saraswati, as his personal contribution to a civilisation searching for a deeper understanding of the basis of life.

An investigative reporter explores an infamous case where an obsessive and unorthodox search for enlightenment went terribly wrong. When thirty-eight-year-old Ian Thorson died from dehydration and dysentery on a remote Arizona mountaintop in 2012, The New York Times reported the story under the headline: "Mysterious Buddhist Retreat in the Desert Ends in a Grisly Death." Scott Carney, a journalist and anthropologist who lived in India for six years, was struck by how Thorson's death echoed other incidents that reflected the little-talked-about connection between intensive meditation and mental instability. Using these tragedies as a springboard, Carney explores how those who go to extremes to achieve divine revelations—and undertake it in illusory ways—can tangle with madness. He also delves into the unorthodox interpretation of Tibetan Buddhism that attracted Thorson and the bizarre teachings

of its chief evangelists: Thorson's wife, Lama Christie McNally, and her previous husband, Geshe Michael Roach, the supreme spiritual leader of Diamond Mountain University, where Thorson died. Carney unravels how the cultlike practices of McNally and Roach and the questionable circumstances surrounding Thorson's death illuminate a uniquely American tendency to mix and match eastern religious traditions like LEGO pieces in a quest to reach an enlightened, perfected state, no matter the cost. Aided by Thorson's private papers, along with cutting-edge neurological research that reveals the profound impact of intensive meditation on the brain and stories of miracles and black magic, sexualized rituals, and tantric rites from former Diamond Mountain acolytes, *A Death on Diamond Mountain* is a gripping work of investigative journalism that reveals how the path to enlightenment can be riddled with danger.

How do some people avoid the slowing down, deteriorating, and weakening that plagues many of their peers decades earlier? Are they just lucky? Or do they know something the rest of us don't? Is it possible to grow older without getting sicker? What if you could look and feel fifty through your eighties and nineties? Founder of the Institute for Aging Research at the Albert Einstein College of Medicine and one of the leading pioneers of longevity research, Dr. Nir Barzilai's life's work is tackling the challenges of aging to delay and prevent the onset of all age-related diseases including "the big four": diabetes, cancer, heart disease, and Alzheimer's. One of Dr. Barzilai's most fascinating studies features volunteers that include 750 SuperAgers—individuals who maintain active lives well into their nineties and even beyond—and, more importantly, who reached that ripe old age never having

experienced cardiovascular disease, cancer, diabetes, or cognitive decline. In *Age Later*, Dr. Barzilai reveals the secrets his team has unlocked about SuperAgers and the scientific discoveries that show we can mimic some of their natural resistance to the aging process. This eye-opening and inspirational book will help you think of aging not as a certainty, but as a phenomenon—like many other diseases and misfortunes—that can be targeted, improved, and even cured.

### **The Goddess Revolution**

Theresa Caputo, TLC's Long Island Medium and the three-time New York Times bestselling author, teaches us how to ritualize and recover from the daily losses in our lives. Life on earth comes with losses that often go unrecognized, unacknowledged, and un-mourned. This invisible pain causes deeper emotional damage—devastation that Theresa Caputo has witnessed in many of her clients. Though they are suffering, they rarely understand where the anguish is coming from—or how to deal with it. Theresa's clients often confuse their emotional distress with depression or anxiety. But it's more than that. It's

grief, deep and profound, and it consumes the soul. The only relief, according to Theresa's special gift she calls Spirit, is to pay more attention to how we experience, ritualize, and recover from the hurt in our lives. Once we name these feelings of grief, recognize the losses for what they are, and create mourning rituals around them, we can move through the pain and begin to heal. It isn't just a good idea to mourn these types of upsets; it's essential, so that we can then enjoy a fresh beginning. In *Good Mourning*, Theresa opens up more than ever before, and with the help of Spirit, helps us manage daily losses to ultimately lead more fulfilling and joyful lives.

Dr. Belisa Vranich's ground-breaking second book teaches the science, techniques, and benefits of breathing correctly and efficiently for warriors in all walks of life. People are less in touch with their bodies—and especially their breathing—than ever before. Ironically, athletes and others who pride themselves on taking care of their bodies actually put themselves at greater risk. Why? Because they're asking their body to take on next-level demands, but failing at life's most essential skill: efficient breathing. Proper breathing is the world's most powerful biohack. Learning it will help you feel better, avoid injury, and perform at your very best (including in bed!). Champion gladiators, master martial artists, even spearfishers all had one thing in common: efficient breathing to achieve flawless execution. An elite few still understand: Navy SEALs who need to make the perfect shot, super-elite weightlifters who truly understand how to harness and channel their energy, free-divers who can spend seemingly impossible amounts of time underwater, and high-profile execs who keep calm before multi-billion-dollar presentations. You can learn their secrets. From the corporate athlete to the tactical ninja,

New York Times Book Review Editors' Choice • An Amazon Best Science Book of 2014 • Scientific American Recommended Read "Fascinating, informative, exhilarating." —Wall Street Journal Deep is a voyage from the ocean's surface to its darkest trenches, the most mysterious places on Earth. Fascinated by the sport of freediving—in which competitors descend great depths on a single breath—James Nestor embeds with a gang of oceangoing extreme athletes and renegade researchers. He finds whales that communicate with other whales hundreds of miles away, sharks that swim in unerringly straight lines through pitch-black waters, and other strange phenomena. Most illuminating of all, he learns that these abilities are reflected in our own remarkable, and often hidden, potential—including echolocation, directional sense, and the profound bodily changes humans undergo when underwater. Along the way, Nestor unlocks his own freediving skills as he communes with the pioneers who are expanding our definition of what is possible in the natural world, and in ourselves. "A journey well worth taking." —David Epstein, New York Times Book Review "Nestor pulls us below the surface into a world far beyond imagining and opens our eyes to these unseen places." —Dallas Morning News "This is popular science writing at its best." —Christian Science Monitor

A simple yet revolutionary approach to improving your body's oxygen use, increasing your health, weight loss, and sports performance—whether you're a recovering couch potato or an Ironman triathlon champion. With a foreword by New York Times bestselling author Dr. Joseph Mercola. Achieve more with less effort: The secret to weight loss, fitness, and wellness lies in the most basic and most overlooked function of your body—how you breathe. One of the biggest obstacles to better health and fitness is a rarely identified problem: chronic over-breathing. We often take many more breaths than we need—without realizing it—contributing to poor health and fitness, including a host of disorders, from anxiety and asthma to insomnia and heart problems. In *The Oxygen Advantage*, the man who has trained over 5,000 people—including Olympic and professional athletes—in reduced breathing exercises now shares his scientifically validated techniques to help you breathe more efficiently. Patrick McKeown teaches you the fundamental relationship between oxygen and the body, then gets you started with a Body Oxygen Level Test (BOLT) to determine how efficiently your body uses oxygen. He then shows you how to increase your BOLT score by using light breathing exercises and learning how to simulate high altitude training, a technique used by Navy SEALs and professional athletes to help increase endurance, weight loss, and vital red blood cells to dramatically improve cardio-fitness. Following his program, even the most out-of-shape person (including those with chronic respiratory conditions such as asthma) can climb stairs, run for a bus, or play soccer without gasping for air, and everyone can achieve:

- Easy weight loss and weight maintenance
- Improved sleep and energy
- Increased concentration
- Reduced breathlessness during exercise
- Heightened athletic performance
- Improved cardiovascular health
- Elimination of asthmatic symptoms, and more.

With *The Oxygen Advantage*, you can look better, feel better, and do more—it's as easy as breathing.

food than ever before? All women are born Goddesses - but we tell ourselves over and over again that for some reason, we don't deserve to feel good. The Goddess Revolution is taking over as the new 'anti-diet'.
