## Tracks in the Sea

The long voyages of discovery and exploration of the vast Pacific Ocean were an exercise in logistics, navigation, hard grit, shipwreck and pure luck. The motivations were scientific and geographic, but at the same time nationalistic and materialistic. This ambitious and informative reference includes the familiar names of Laperouse, Bougainville, Cook and Dampier, as well as the intriguing stories of the Bounty Mutiny, scurvy, and the mysterious Northwest Passage, Terra Australis Ignota and Davis Land. There are cross-referenced entries on first contacts, ships, navigational instruments, mapping, and botany. The scene is carefully set in the introduction, the chronology spans several centuries, and the extensive bibliography offers a guide to further reading.

## Helen Dunmore, Jo Shapcott, Matthew Sweeney

"Alien Ocean immerses readers in worlds being newly explored by marine biologists: the deep sea, the microscopic realm, and oceans beyond national boundaries. Working alongside scientists on ships at sea, in coastal research labs, and at undersea volcanoes, Stefan Helmreich charts how revolutions in genomics, bioinformatics, and remote sensing have pressed marine biologists to view the sea as animated by its smallest inhabitants: marine microbes. Thriving in astonishingly extreme conditions, such

microbes have become key figures in scientific and public debates about the origin of life, climate change, biotechnology, and even the possibility of life on other worlds."--Cover.

## Water Worlds: Human Geographies of the Ocean

Our world is a water world. Seventy percent of our planet consists of ocean. However, geography has traditionally overlooked this vital component of the earth's composition. The word 'geography' directly translates as 'earth writing' and in line with this definition the discipline has preoccupied itself with the study of terrestrial spaces of society and nature. This book challenges human geography's preoccupation with the terrestrial, investigating the terra incognita of the seas and oceans. Linking to new theoretical debates shaping the geographic discipline (such as affect, assemblage, emotion, hybridity and the more-than-human), this volume unlocks new knowledge concerning the human geographies of ocean space. The book casts adrift stable, bounded and fixed conceptions of space and advances geographical understanding based on the world as 'becoming', changing, mobile and processional. This ontology supports the notion that the oceans are not simply fluid in a literal way, but also in a conceptual sense, suggesting that the seas have their own fluid natures - their own capacities and agencies - which are co-fabricated with social and cultural life. This book features twelve chapters, authored by key academics contributing to this growing field of research. The book is divided into three sections, including an Introduction by the editors and a foreword by Prof. Philip E. Steinberg, the leading scholar in the field of maritime geographies. The first section of the book considers the ways in which different watery spaces from the Atlantic Ocean to the Mediterranean Sea have been conceptualized, theorized and known

## Read PDF Tracks In The Sea Matthew Fontaine Maury And The Mapping Of The Oceans

through metaphors, voyages of discovery and scientific endeavour. The second section examines how oceans are experienced; through various activities including driving on water, kayaking in water and diving under water. The final section explores the relations between human life and the nature of the sea as a material, mobile and more-than-human spa

The long-standing Western fascination with the polar regions resonates anew with the growing concerns over global climate change. Scientists exploring the role of the extremem latitudes now recognize the importance of polar oceans and sea ice for our climate. While the exploits of polar explorer's efforts to comprehend the polar oceans are for the first time chronicled in this volume.

Another volume in a series highlighting contemporary British poetry. It features the work of three poets and they themselves have made the selections.

### Notice to Mariners

Science and medicine have been critical to southern history and the formation of southern culture. For three centuries, scientists in the South have documented the lush natural world around them and set a lasting tradition of inquiry. The medical history of the region, however, has been at times tragic. Disease, death, and generations of poor health have been the legacy of slavery, the plantation economy, rural life, and poorly planned cities. The essays in this volume explore this legacy as well as recent developments in technology, research, and medicine in the South. Subjects include natural history, slave health, medicine in the Civil War, public health, eugenics, HIV/AIDS, environmental health, and the rise of research institutions and hospitals, to name but a few. With 38 thematic essays, 44 topical entries, and

# Read PDF Tracks In The Sea Matthew Fontaine Maury And The Mapping Of The Oceans

a comprehensive overview essay, this volume offers an authoritative reference to science and medicine in the American South.

## The Eastern Bering Sea Shelf

## International Journal of Maritime History

A great story of discovery and adventure in the tradition of Longitude Maritime navigation remained largely a matter of guesswork until well into the 19th century, and making a voyage meant following a series of all-too-often disastrous hunches. Changing that became the lifelong obsession of the brilliant, irascible geographer Matthew Fontaine Maury, whose career both aided and mirrored America's rise as a maritime power. With his controversial appointment as the first superintendent of the U.S. Naval Observatory in 1840, he at last found his life's work. While others built railroads across the trackless interior, Maury mapped the highways of wind and current over the previously trackless sea. In *Tracks in the Sea*, Chester G. Hearn uses Maury's career as a window on the 19th century, including the brief but glorious clipper-ship era of the 1850s, the rise of steam and steel, the Civil War and the destruction of the U.S. merchant fleet, and the points of intersection with some of the most colorful and influential people of the time, including presidents, congressmen, military leaders, scientists, explorers, merchants, and writers.
