### Inner Vision

"How Art Works explores puzzles that have preoccupied philosophers as well as the general public: Can art be defined? How do we decide what is good art? Why do we gravitate to sadness in art? Why do we devalue a perfect fake? Could 'my kid have done that'? Does reading fiction enhance empathy? Drawing on careful observations, probing interviews, and clever experiments, Ellen Winner reveals surprising answers to these and other artistic mysteries." --Jacket.

## The Artist's Eyes

Vision is our most dominant sense. From the light that enters our eyes to the complex cognitive processes that follow, we derive most of our information about what things are, where they are and how they move from our vision.

## Photography and the Art of Seeing

In 1911, famed cartoonist Winsor McCay debuted one of the first animated cartoons, based on his sophisticated newspaper strip “Little Nemo in Slumberland,” itself inspired by Freud’s recent research on dreams. McCay is largely forgotten today, but he unleashed an art form, and the creative energy of artists from Otto Messmer and Max Fleischer to Walt Disney and Warner Bros.’ Chuck Jones. Their origin stories, rivalries, and sheer genius, as Reid Mitenbuler skillfully relates, were as colorful and subversive as their creations—from Felix the Cat to Bugs Bunny to feature films such as *Fantasia*—which became an integral part and reflection of American culture over the next five decades. Pre-television, animated cartoons were aimed squarely at adults; comic preludes to movies, they were often “little hand grenades of social and political satire.” Early Betty Boop cartoons included nudity; Popeye stories contained sly references to the injustices of unchecked capitalism. “During its first half-century,” Mitenbuler writes, “animation was an important part of the culture wars about free speech,

ensorship, the appropriate boundaries of humor, and the influence of art and media on society. ” During WWII it also played a significant role in propaganda. The Golden Age of animation ended with the advent of television, when cartoons were sanitized to appeal to children and help advertisers sell sugary breakfast cereals. *Wild Minds* is an ode to our colorful past and to the creative energy that later inspired *The Simpsons*, *South Park*, and *BoJack Horseman*.

### Reductionism in Art and Brain Science

"The Story of Art is one of the most famous and popular books on art ever published. For 45 years it has remained unrivalled as an introduction to the whole subject, from the earliest cave paintings to the experimental art of today. Readers of all ages and backgrounds throughout the world have found in Professor Gombrich a true master, who combines knowledge and wisdom with a unique gift for communicating directly his own deep love of the works of art he describes." "The Story of Art owes its lasting popularity to the directness and simplicity of the writing, and also the author's skill in presenting a clear narrative. He describes his aim as 'to bring some intelligible order into the wealth of names, periods and styles which crowd the pages of more ambitious works', and using his insight into the psychology of the visual arts, he makes us see the history of art as 'a continuous weaving and changing of traditions in which each work refers to the past and points to the future, a living chain that still links our own time with the Pyramid age'. In its new format, the 16th edition of this classic work is set to continue its triumphant progress for future generations and to remain the first choice for all newcomers to art."--BOOK JACKET. groundbreaking book *Don't Let Me Be Lonely: An American Lyric*. Claudia Rankine's bold new book recounts mounting racial aggressions in ongoing encounters in twenty-first-century daily life and in the media. Some of these encounters are slights, seeming slips of the tongue, and some are intentional offensives in the classroom, at the supermarket, at home, on the tennis court with Serena Williams and the soccer field with Zinedine Zidane, online, on TV-everywhere, all the time. The accumulative stresses come to bear on a person's ability to speak, perform, and stay alive. Our addressability is tied to the state of our belonging, Rankine argues, as are our assumptions and expectations of citizenship. In essay, image, and poetry, *Citizen* is a powerful testament to the individual and collective effects of racism in our contemporary, often named "post-race" society.

**#1 NEW YORK TIMES BESTSELLER • ONE OF ESSENCE ' S 50 MOST IMPACTFUL BLACK BOOKS OF THE PAST 50 YEARS** In this iconic memoir of his early days, Barack Obama “ guides us straight to the intersection of the most serious questions of identity, class, and race ” (The Washington Post Book World). “ Quite extraordinary. ” —Toni Morrison In this lyrical, unsentimental, and compelling memoir, the son of a black African father and a white American mother searches for a workable meaning to his life as a black American. It begins in New York, where Barack Obama learns that his father—a figure he knows more as a myth than as a man—has been killed in a car accident. This sudden death inspires an emotional odyssey—first to a small town in Kansas, from which he retraces the migration of his mother ’ s family to Hawaii, and then to Kenya, where he meets the African side of his family, confronts the bitter truth of his father ’ s life, and at last reconciles his divided inheritance. A deeply researched warning about how the digital economy threatens artists' lives and work—the music, writing, and visual art that sustain our souls and societies—from an award-winning essayist and critic There are two stories you hear about earning a living as an artist in the digital age. One comes from Silicon Valley. There's never been a better time to be an artist, it goes. If you've got a laptop, you've got a recording studio. If you've got an iPhone, you've got a movie camera. And if production is cheap, distribution is free: it's called the Internet. Everyone's an artist; just tap your creativity and put your stuff out there. The other comes from artists themselves. Sure, it goes, you can put your stuff out

there, but who's going to pay you for it? Everyone is not an artist. Making art takes years of dedication, and that requires a means of support. If things don't change, a lot of art will cease to be sustainable. So which account is true? Since people are still making a living as artists today, how are they managing to do it? William Deresiewicz, a leading critic of the arts and of contemporary culture, set out to answer those questions. Based on interviews with artists of all kinds, *The Death of the Artist* argues that we are in the midst of an epochal transformation. If artists were artisans in the Renaissance, bohemians in the nineteenth century, and professionals in the twentieth, a new paradigm is emerging in the digital age, one that is changing our fundamental ideas about the nature of art and the role of the artist in society.

In 1500 CE, the Inca empire covered most of South America's Andean region. The empire's leaders first met Europeans on November 15, 1532, when a large Inca army confronted Francisco Pizarro's band of adventurers in the highland Andean valley of Cajamarca, Peru. At few other times in its history would the Inca royal leadership so aggressively showcase its moral authority and political power. Glittering and truculent, what Europeans witnessed at Inca Cajamarca compels revised understandings of pre-contact

Inca visual art, spatial practice, and bodily expression. This book takes a fresh look at the encounter at Cajamarca, using the episode to offer a new, art-historical interpretation of pre-contact Inca culture and power. Adam Herring's study offers close readings of Inca and Andean art in a variety of media: architecture and landscape, geoglyphs, sculpture, textiles, ceramics, featherwork and metalwork. The volume is richly illustrated with over sixty color images.

### Visualizing Research

Now available in paperback for the first time, this classic work presents a cognitive-semiotic framework for understanding how maps work as powerful, abstract, and synthetic spatial representations. Explored are the ways in which the many representational choices inherent in mapping interact with information processing and knowledge construction, and how the resulting insights can be used to make informed symbolization and design decisions. A new preface to the paperback edition situates the book within the context of contemporary technologies. As the nature of maps continues to evolve, Alan MacEachren emphasizes the ongoing need to think systematically about the ways people interact with and use spatial information.

### Art and Visual Perception

Are art and science separated by an unbridgeable divide? Can they find common ground? In this new book, neuroscientist Eric R. Kandel, whose remarkable scientific career and deep interest in art give him

a unique perspective, demonstrates how science can inform the way we experience a work of art and seek to understand its meaning. Kandel illustrates how reductionism—the distillation of larger scientific or aesthetic concepts into smaller, more tractable components—has been used by scientists and artists alike to pursue their respective truths. He draws on his Nobel Prize-winning work revealing the neurobiological underpinnings of learning and memory in sea slugs to shed light on the complex workings of the mental processes of higher animals. In *Reductionism in Art and Brain Science*, Kandel shows how this radically reductionist approach, applied to the most complex puzzle of our time—the brain—has been employed by modern artists who distill their subjective world into color, form, and light. Kandel demonstrates through bottom-up sensory and top-down cognitive functions how science can explore the complexities of human perception and help us to perceive, appreciate, and understand great works of art. At the heart of the book is an elegant elucidation of the contribution of reductionism to the evolution of modern art and its role in a monumental shift in artistic perspective. Reductionism steered the transition from figurative art to the first explorations of abstract art reflected in the works of Turner, Monet, Kandinsky, Schoenberg, and Mondrian. Kandel explains how, in the postwar era, Pollock, de Kooning, Rothko, Louis, Turrell, and Flavin used a reductionist approach to arrive at their abstract expressionism and how Katz, Warhol, Close, and Sandback built upon the advances of the New York School to reimagine figurative and minimal art. Featuring captivating drawings of the brain alongside full-color reproductions of modern art masterpieces, this book draws out the common concerns of science and art and how they illuminate each other.

Food: The Key Concepts presents an exciting, coherent and interdisciplinary introduction to food studies for the beginning reader. Food Studies is an increasingly complex field, drawing on disciplines as diverse as Sociology, Anthropology and Cultural Studies at one end and Economics, Politics and Agricultural Science at the other. In order to clarify the issues, Food: The Key Concepts distills food choices down to three competing considerations: consumer identity; matters of convenience and price; and an awareness of the consequences of what is consumed. The book concludes with an examination of two very different future scenarios for feeding the world's population: the technological fix, which looks to science to provide the solution to our future food needs; and the anthropological fix, which hopes to change our expectations and behaviors. Throughout, the analysis is illustrated with lively case studies. Bulleted chapter summaries, questions and guides to further reading are also provided.

A New York Times Notable Book of 2020 Named one of the best books of 2020 by *The New Yorker*; BBC; NPR; Time ("100 Must-read Books"); Kirkus; and *The Washington Post* ("50 Notable Works of Fiction") In the highly anticipated follow-up to his beloved debut, *What Belongs to You*, Garth Greenwell deepens his exploration of foreignness, obligation, and desire Sofia, Bulgaria, a landlocked city in southern Europe, stirs with hope and impending upheaval. Soviet buildings crumble, wind scatters sand from the far south, and political protesters flood the streets with song. In this atmosphere of disquiet, an American teacher navigates a life transformed by the discovery and loss of love. As he prepares to leave the place he's come to call home, he grapples with the intimate encounters that have marked his years abroad, each bearing uncanny reminders of his past. A queer student's confession recalls his own first love, a stranger's seduction devolves into paternal sadism, and a romance with another foreigner opens, and heals, old wounds. Each echo reveals startling insights about what it means to seek connection: with those we love, with the places we inhabit, and with our own fugitive selves.

Does the world appear the same to everyone? Does what we know determine what we see? Why do we see the world as we do? Vision is our most dominant sense. From the light that enters our eyes to the complex cognitive processes that follow, we derive most of our information about what things are, where they are, and how they move from our vision. Visual Perception takes a refreshingly different approach to this enigmatic sense. From the function that vision serves for an active observer, to the history of visual perception itself the third edition has been extensively revised, updated and expanded, while still preserving the essential features of historical context, neurophysiology and independent thought that made the earlier editions so engaging. Covering the perception of location, motion, object recognition and with up-to-date information on the workings of the visual brain, the 3rd edition looks at how our ideas have been shaped, not just by psychology, but by art, optics, biology and philosophy. The emphasis on understanding vision as a basis for action in the real world has also been expanded to cover seeing representations of all sorts, whether they are pictures or computer-generated displays. The 3rd Edition of Visual Perception is a readable, accessible and truly relevant introduction to the world of perception and will be welcomed by students of visual perception as well as anyone with a general interest in the mysteries and wonder of vision.

Socially situated planning provides one mechanism for improving the social awareness of agents. Nonetheless, our experience in some real-world military simulation applications suggest that the approach, even in its preliminary state, is adequate to model some social interactions, and certainly extends the state-of-the-art found in traditional training simulation systems. ' Mapping the Terrain ' then describes methods of contextualizing research in art and design (the contextual review, using reference material); ' Locating Your Position ' and ' Crossing the Terrain ' guide the reader through the stages of identifying an appropriate research question and methodological approach, writing the proposal and managing research information. Methods of evaluation and analysis are explored, and of strategies for reporting and communicating research findings are suggested. Appendices and a glossary are also included. Visualizing Research draws on the experience of researchers in different contexts and includes case studies of real projects. Although written primarily for postgraduate students, research supervisors, managers and academic staff in art and design and related areas, such as architecture and media studies, will find this a valuable research reference. ### The Death of the Artist

On Late Style examines the work produced by great artists -Beethoven, Thomas Mann, Jean Genet among them - at the end of their lives. Said makes it clear that, rather than the resolution of a lifetime's artistic endeavour, most of the late works discussed are rife with contradiction and almost impenetrable complexity. He helps us see how, though these works often stood in direct contrast to the tastes of society, they were, just as often, announcements of what was to come in the artist's discipline - works of true artistic genius.

A charming, practical, and unsentimental approach to putting a home in order while reflecting on the tiny joys that make up a long life. In Sweden there is a kind of decluttering called *döstädning*, *döst* meaning “ death ” and *städning* meaning “ cleaning. ” This surprising and invigorating process of clearing out unnecessary belongings can be undertaken at any age or life stage but should be done sooner than later, before others have to do it for you. In *The Gentle Art of Swedish Death Cleaning*, artist Margareta Magnusson, with Scandinavian humor and wisdom, instructs readers to embrace minimalism. Her radical and joyous method for putting things in order helps families broach sensitive conversations, and makes the process uplifting rather than overwhelming. Margareta suggests which possessions you can easily get rid of (unworn clothes, unwanted presents, more plates than you ’ d ever use) and which you might want to keep (photographs, love letters, a few of your children ’ s art projects). Digging into her late husband ’ s tool shed, and her own secret drawer of vices, Margareta introduces an element of fun to a potentially daunting task. Along the way readers get a glimpse into her life in Sweden, and also become more comfortable with the idea of letting go.

### The Gentle Art of Swedish Death Cleaning

NOW WITH ADDITIONAL MATERIAL #1 NEW YORK TIMES BESTSELLER WINNER OF THE BOOKER PRIZE FOR FICTION More than fifteen years after the events of *The Handmaid's Tale*, the theocratic regime of the Republic of Gilead maintains its grip on power, but there are signs it is beginning to rot from within. At this crucial moment, the lives of three radically different women converge, with potentially explosive results. Two have grown up as part of the first generation to come of age in the new order. The testimonies of these two young women are joined by a third: Aunt Lydia. Her complex past and uncertain future unfold in surprising and pivotal ways. With *The Testaments*, Margaret Atwood opens up the innermost workings of Gilead, as each woman is forced to come to terms with who she is, and how far she will go for what she believes. *The Testaments* is a modern masterpiece,

### Introduction to Art

A Harvard neurobiologist explains how vision works, citing the scientific origins of artistic genius and providing coverage of such topics as optical illusions and the correlation between learning disabilities and artistic skill.

### Art and Vision in the Inca Empire

"Mind-blowing." —Kim Gordon A Sand Book is a poetry collection in nine parts, a travel guide that migrates from wildfires to hurricanes, tweety bird to the president, lust to aridity, desertification to prophecy, and mother to daughter. It explores the negative space of what is happening to language and to consciousness in our strange and desperate times. From Hurricane Sandy to the murder of Sandra Bland to the massacre at Sandy Hook, from the sand in the gizzards of birds to the desertified mountains of Haiti, from Attar's Conference of the Birds to Chaucer's Parliament of Fowls to Twitter, a sand book is about change and quantification, the relationship between catastrophe and cultural transmission. It moves among houses of worship and grocery stores, flitters between geological upheaval and the weird weather of the Internet. In her long-awaited follow-up to Mercury, Reines has written her most ambitious work to date, but also her most visceral and satisfying.

### Socially Intelligent Agents

Beautifully illustrated and vividly written, "Inner Vision" explores how different areas of the brain shape responses to visual arts. 84 color illustrations. 8 halftones. 30 line illustrations.
